Example of supportive code review

#5

Berdir points two problems, we can review them in order:

That test uses its own mock date formatter (with wrong arguments), it could just as well use the actual date string that it expects.

If you check: Drupal\Core\Datetime::format() method signature you will see:

```
public function format($timestamp, $type = 'medium', $format = '', $timezone = NULL,
$langcode = NULL) {
...
}
```

That means that the first argument is a timestamp and the second the type if you check how the mock is being used you will see:

```
$this->assertEquals($this->dateFormatter->format('html_date'), $result);
```

The format method is receiving just the type and it should be receiving the timestamp first, so for this example, you need to define that variable (in your patch you don't even define the \$\text{timestamp}\$ variable you just use it.)

And the other problem is:

Also strange that time doesn't seem to be defined at all, would make more sense to explicitly define that and also explicitly assert the received arguments in the mocked method.

If you see what is being rendered:

```
$result = $twig->render('{{ time!format_date("html_date") }}');
```

The time variable is not defined, so you need to defined it as well,

If you check the render signature:

Hi anantjain60.

#5

Berdir points two problems, we can review them in order:

That test uses its own mock date formatter (with wrong arguments), it could just as well use the actual date string that it expects.

If you check: Drupal\Core\Datetime::format() method signature you will see:

```
public function format($timestamp, $type = 'medium'
$langcode = NULL) {
...
}
```

Thorough explanation of feedback

That means that the first argument is a timestamp an how the mock is being used you will see:

```
$this->assertEquals($this->dateFormatter->format('html_date'), $result);
```

The format method is receiving just the type and it should be receiving the timestamp first, so for this example, you need to define that variable (in your patch you don't even define the \$\text{timestamp}\$ variable you just use it.)

And the other problem is:

Also strange that time doesn't seem to be defi sense to explicitly define that and also expl arguments in the mocked method.

If you see what is being rendered:

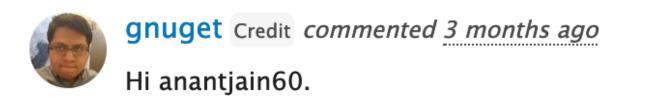

Focus on correcting code, not the person

```
$result = $twig->render('{{ time|format_date("html_
```

The time variable is not defined, so you need to defined it as well,

If you check the render signature:

Example of supportive code review

Berdir points two problems, we can review them in order:

That test uses its own mock date formatter (with wrong arguments), it could just as well use the actual date string that it expects.

If you check: Drupal\Core\Datetime::format() method signature you will see:

This is important because 21% of people who experienced negative behavior stopped contributing to Open Source projects altogether

(Source: Gitlab)

```
stamp, $type = 'medium', $format = '', $timezone = NULL,
```

nent is a timestamp and the second the type if you check u will see:

```
iteFormatter->format('html_date'), $result);
```

just the type and it should be receiving the timestamp need to define that variable (in your patch you don't even you just use it.)

And the other problem is:

Also strange that time doesn't seem to be defined at all, would make more sense to explicitly define that and also explicitly assert the received arguments in the mocked method.

If you see what is being rendered:

```
$result = $twig->render('{{ time!format_date("html_date") }}');
```

The time variable is not defined, so you need to defined it as well,

If you check the render signature:

Upgrading 7 + 8

Upgrading 8 + 9

Upgrading 7 + 8

Upgrading 8 5 9

Question:

How many of you are on Drupal 7? Or have customers still on Drupal 7?

No need to panic:

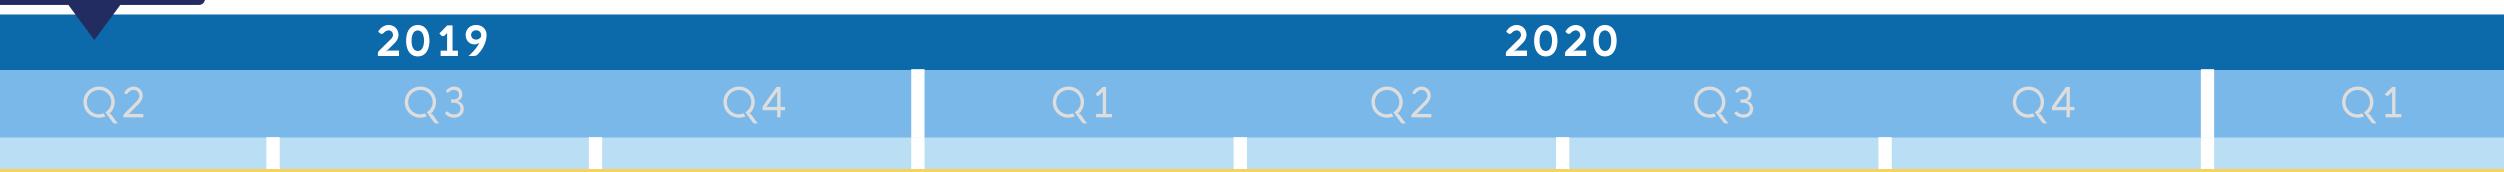

Drupal 7 will be community supported for another 2 years and 7 months

No need to panic:

Drupal 7 will be community supported for another 2 years and 7 months

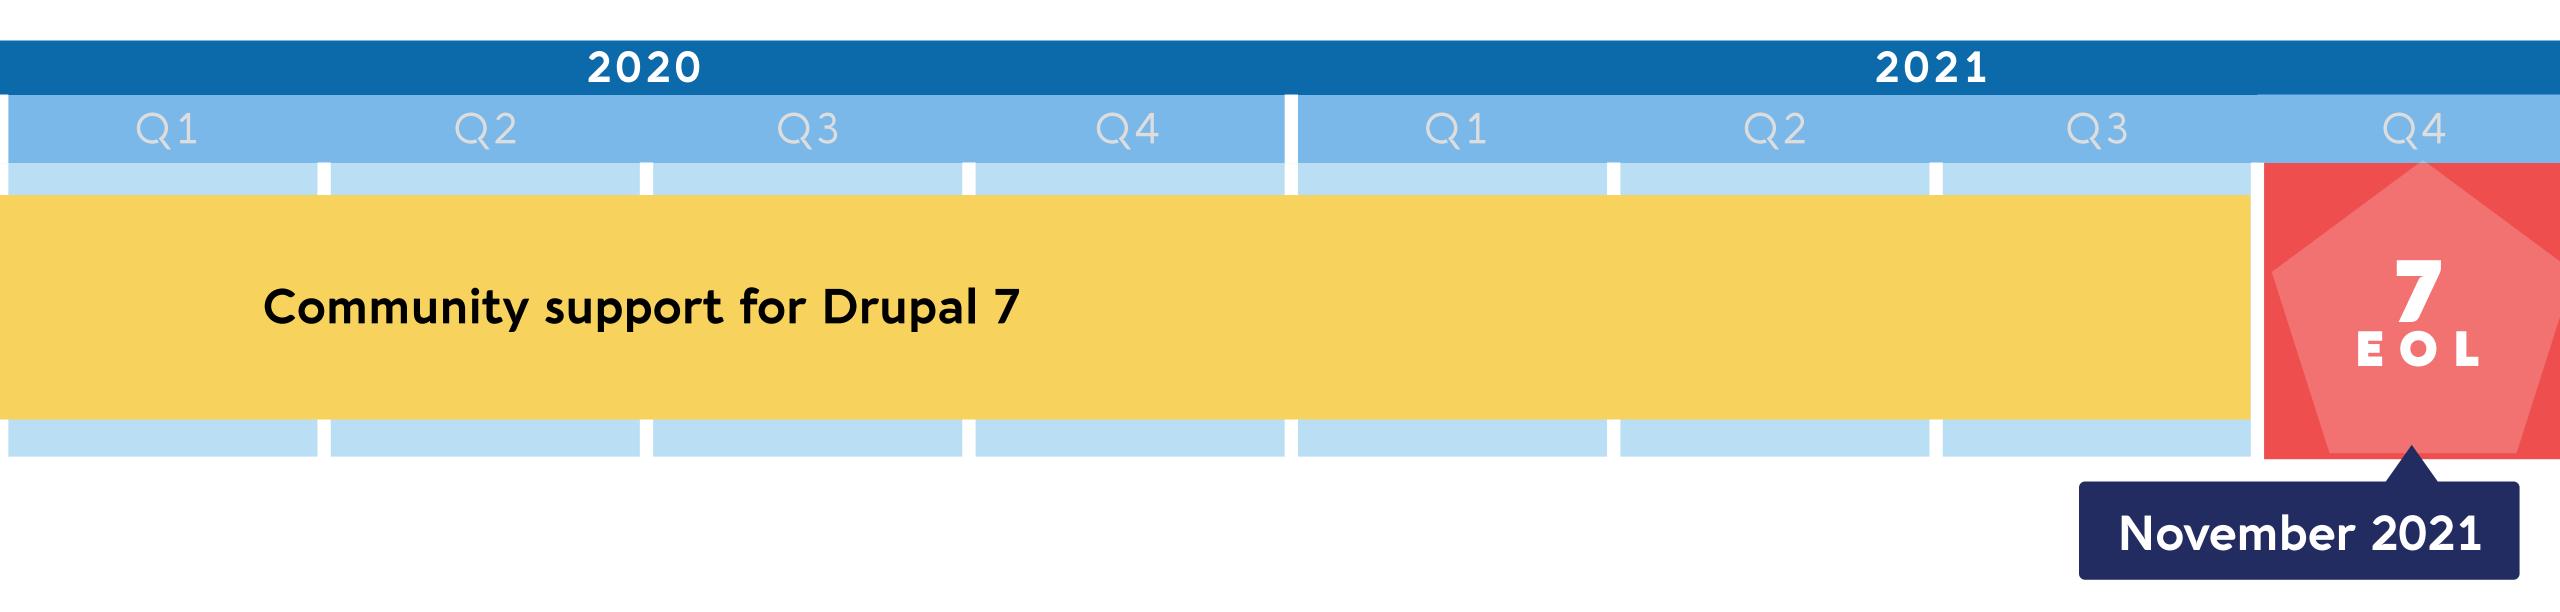

Today

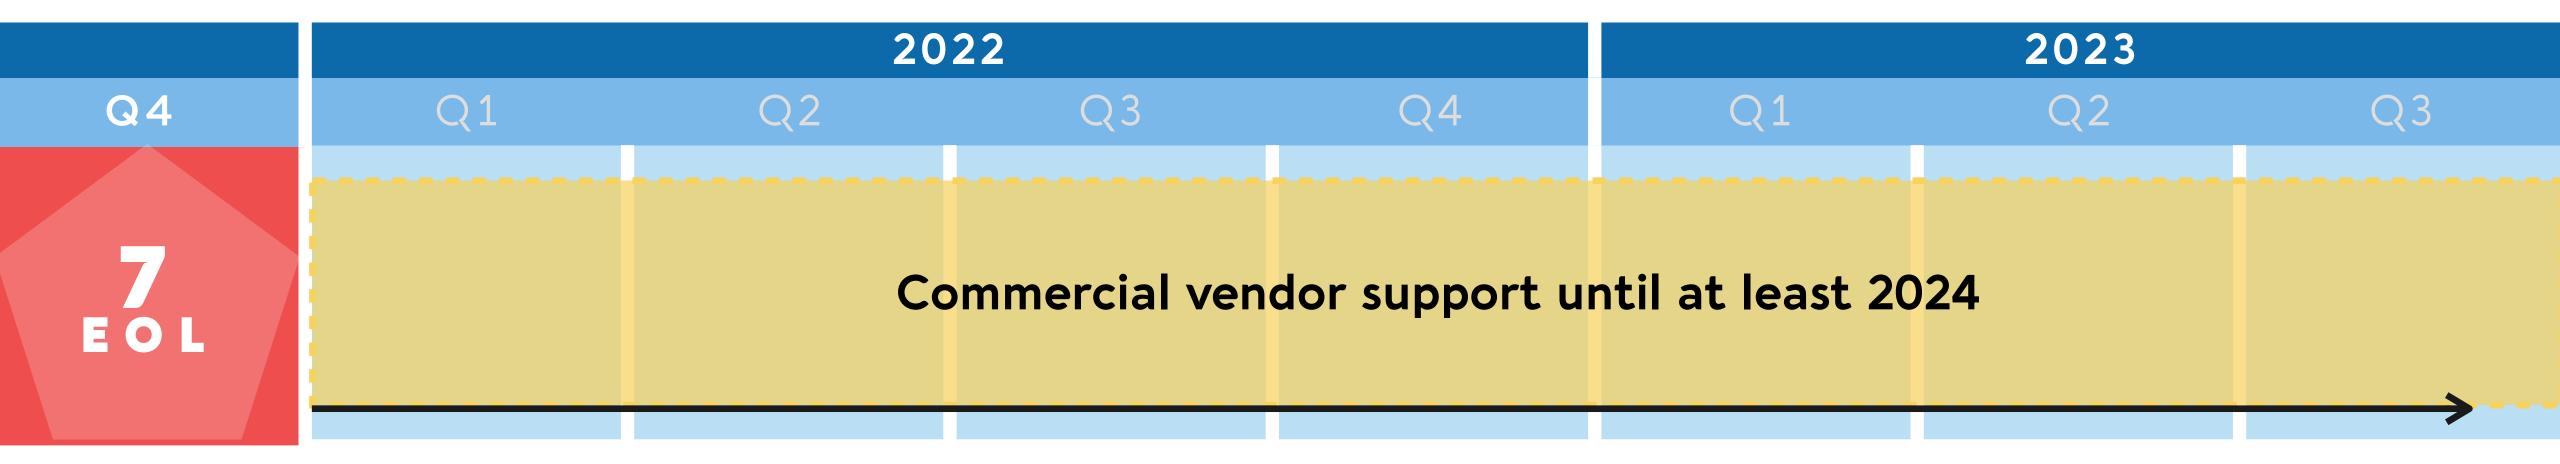

Community support for Drupal 7

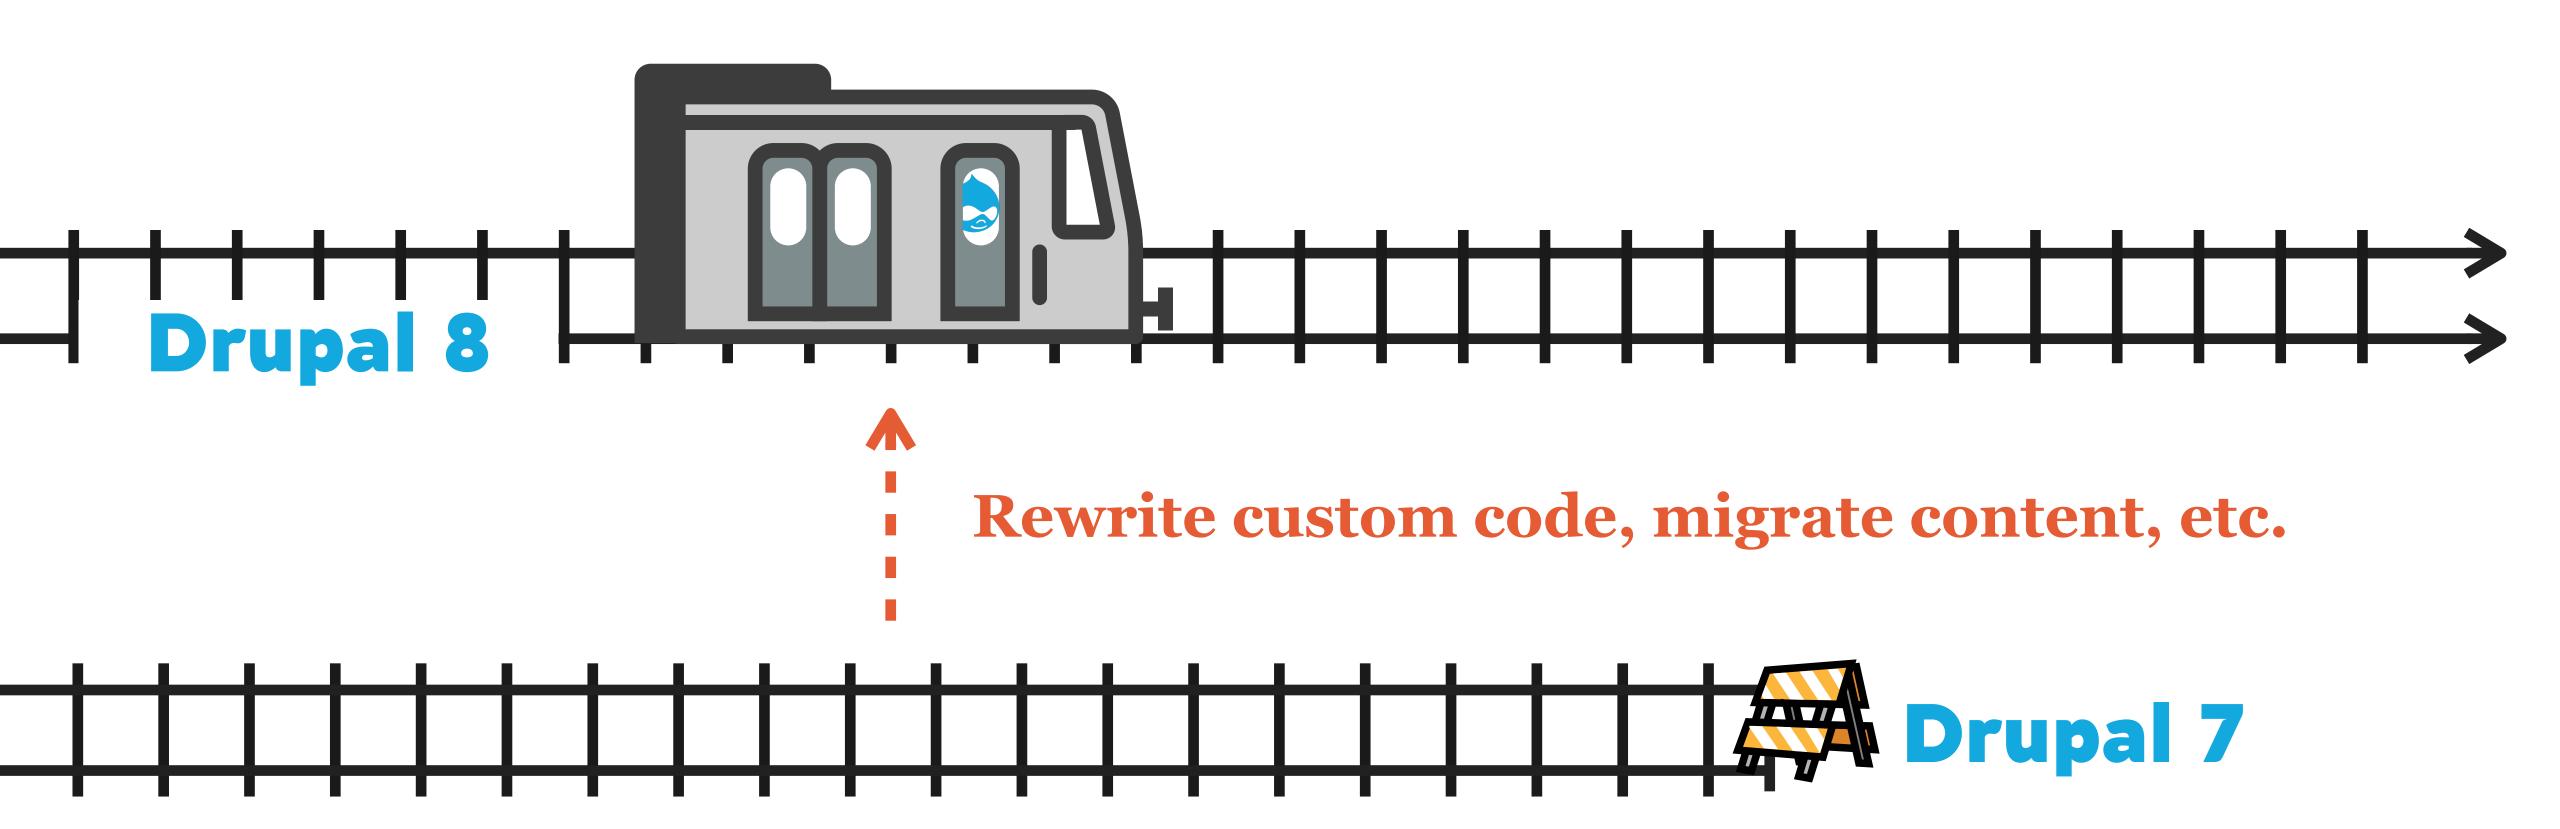

No need to panic:

Drupal 7 will be community supported for another 2 years and 7 months

After community support ends, some vendors will continue to support Drupal 7 commercially **until at least 2024**

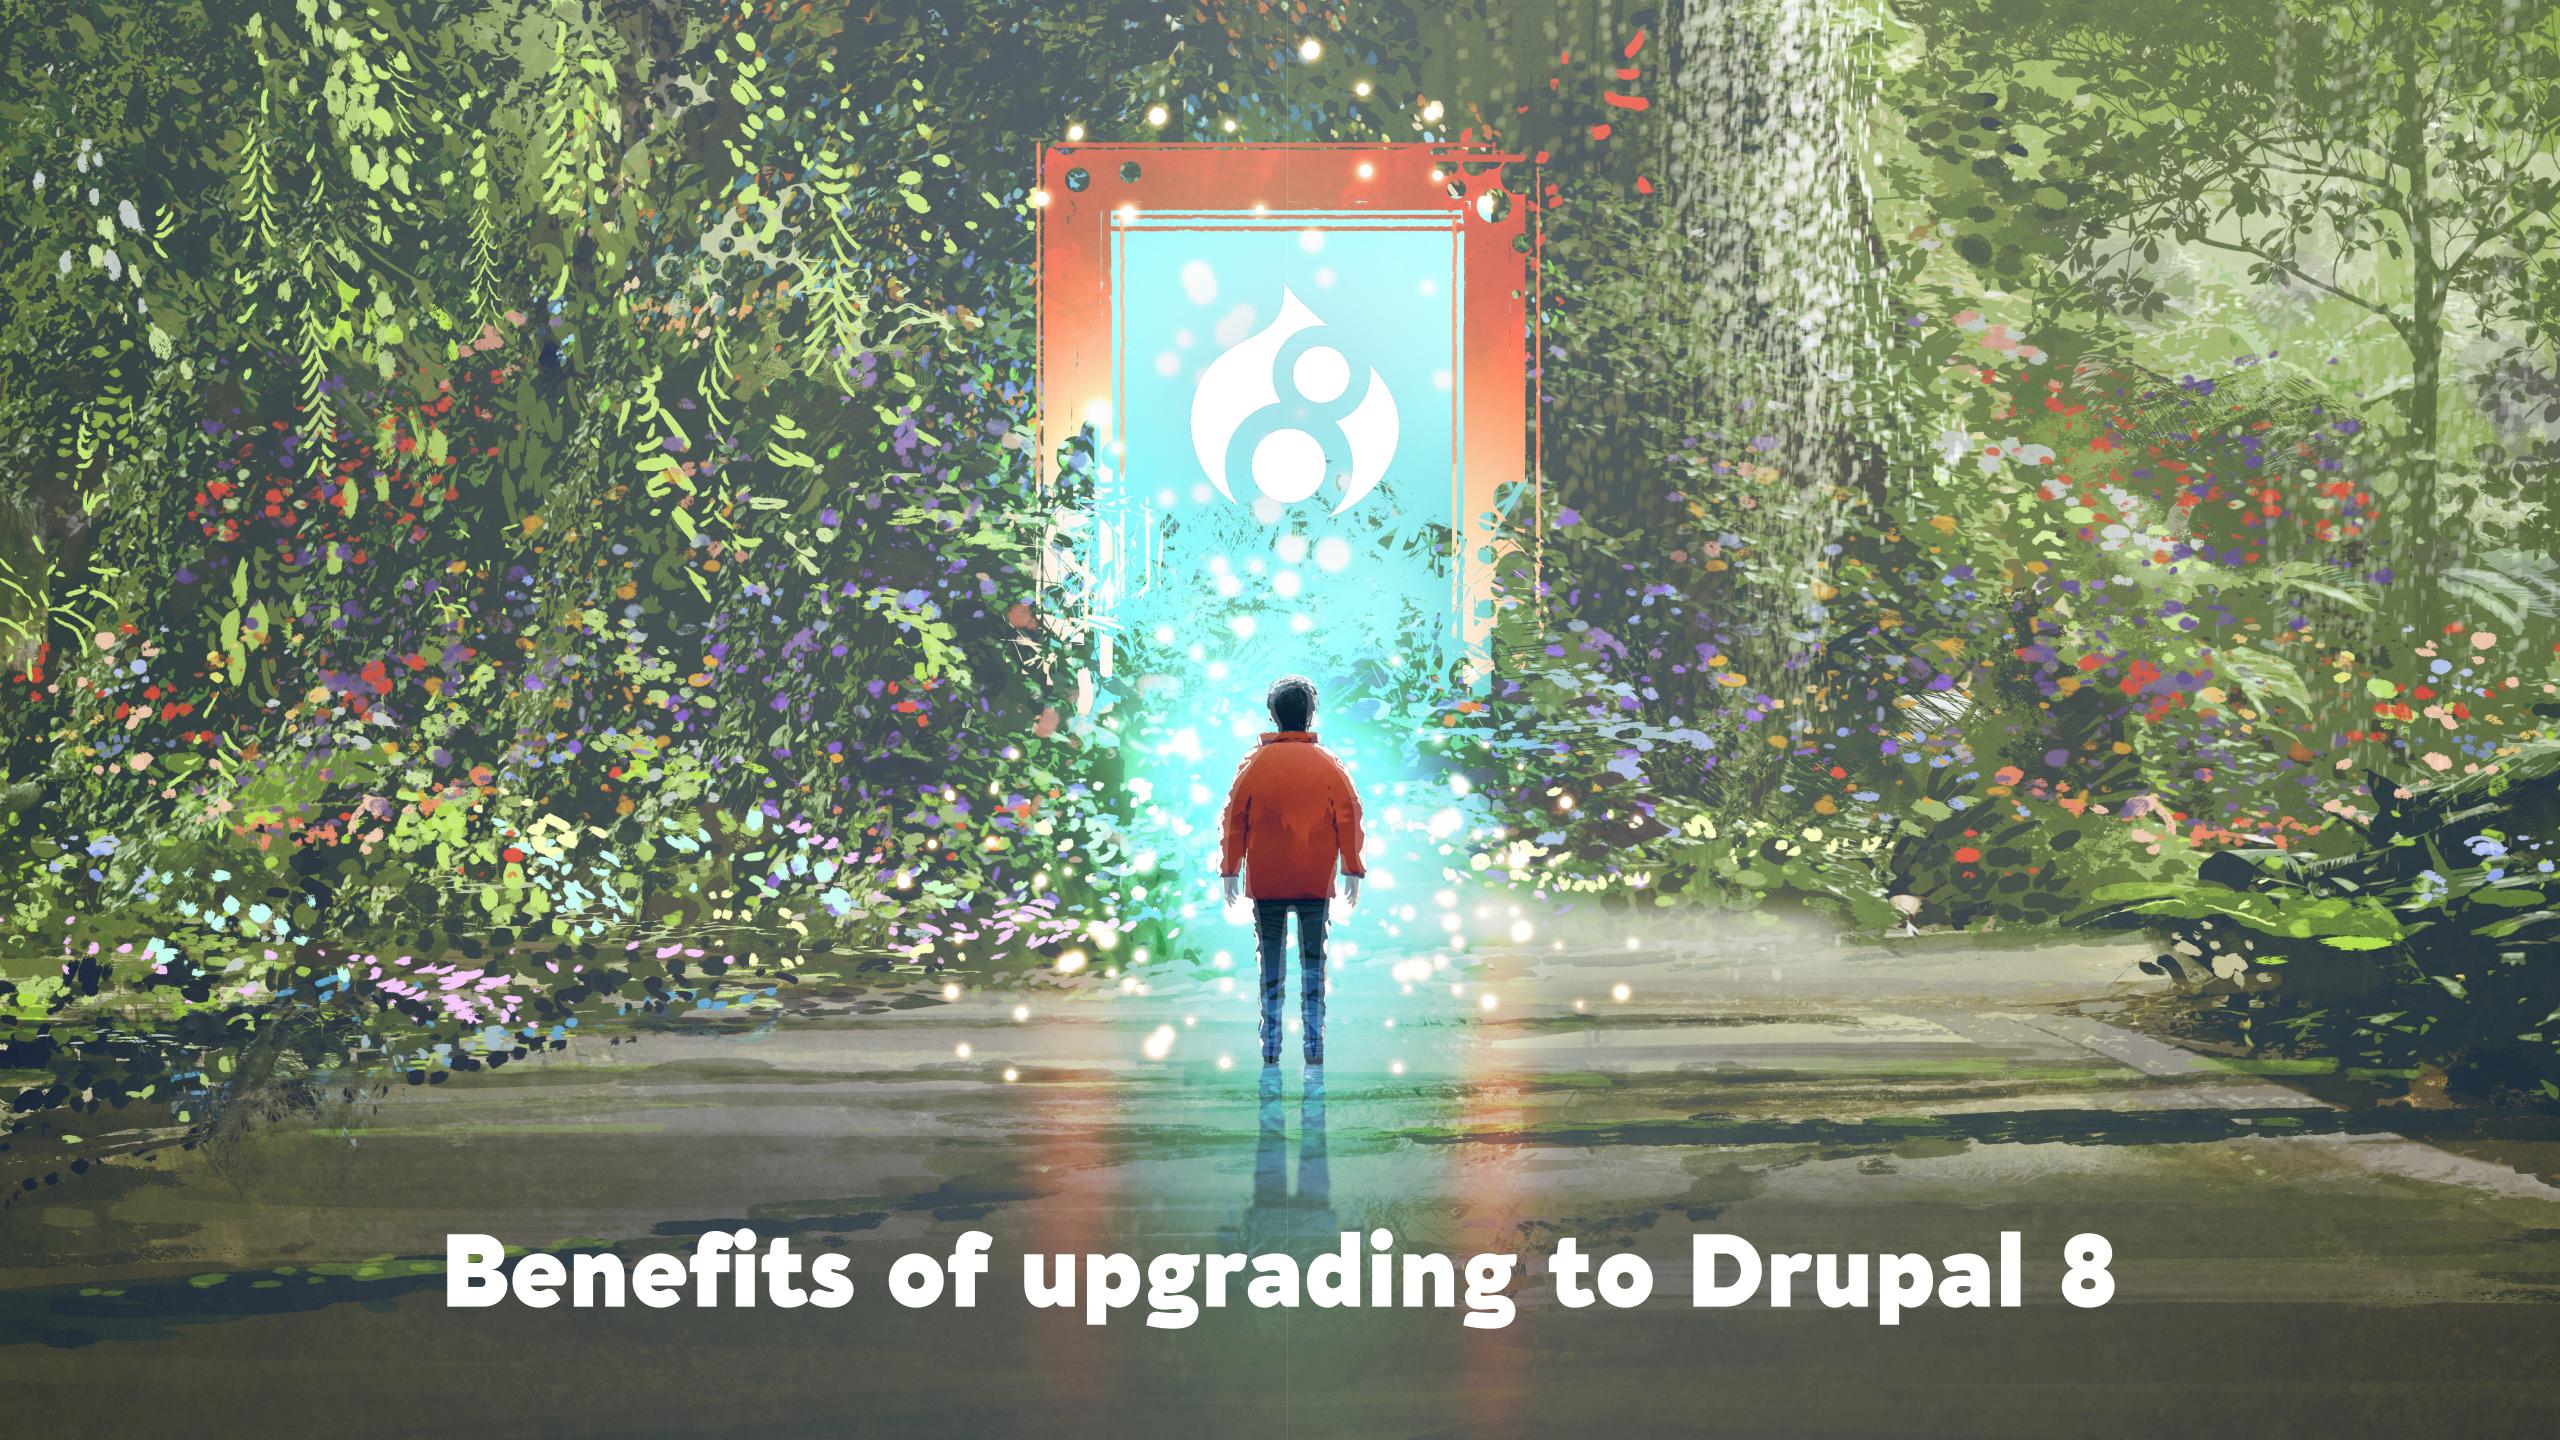

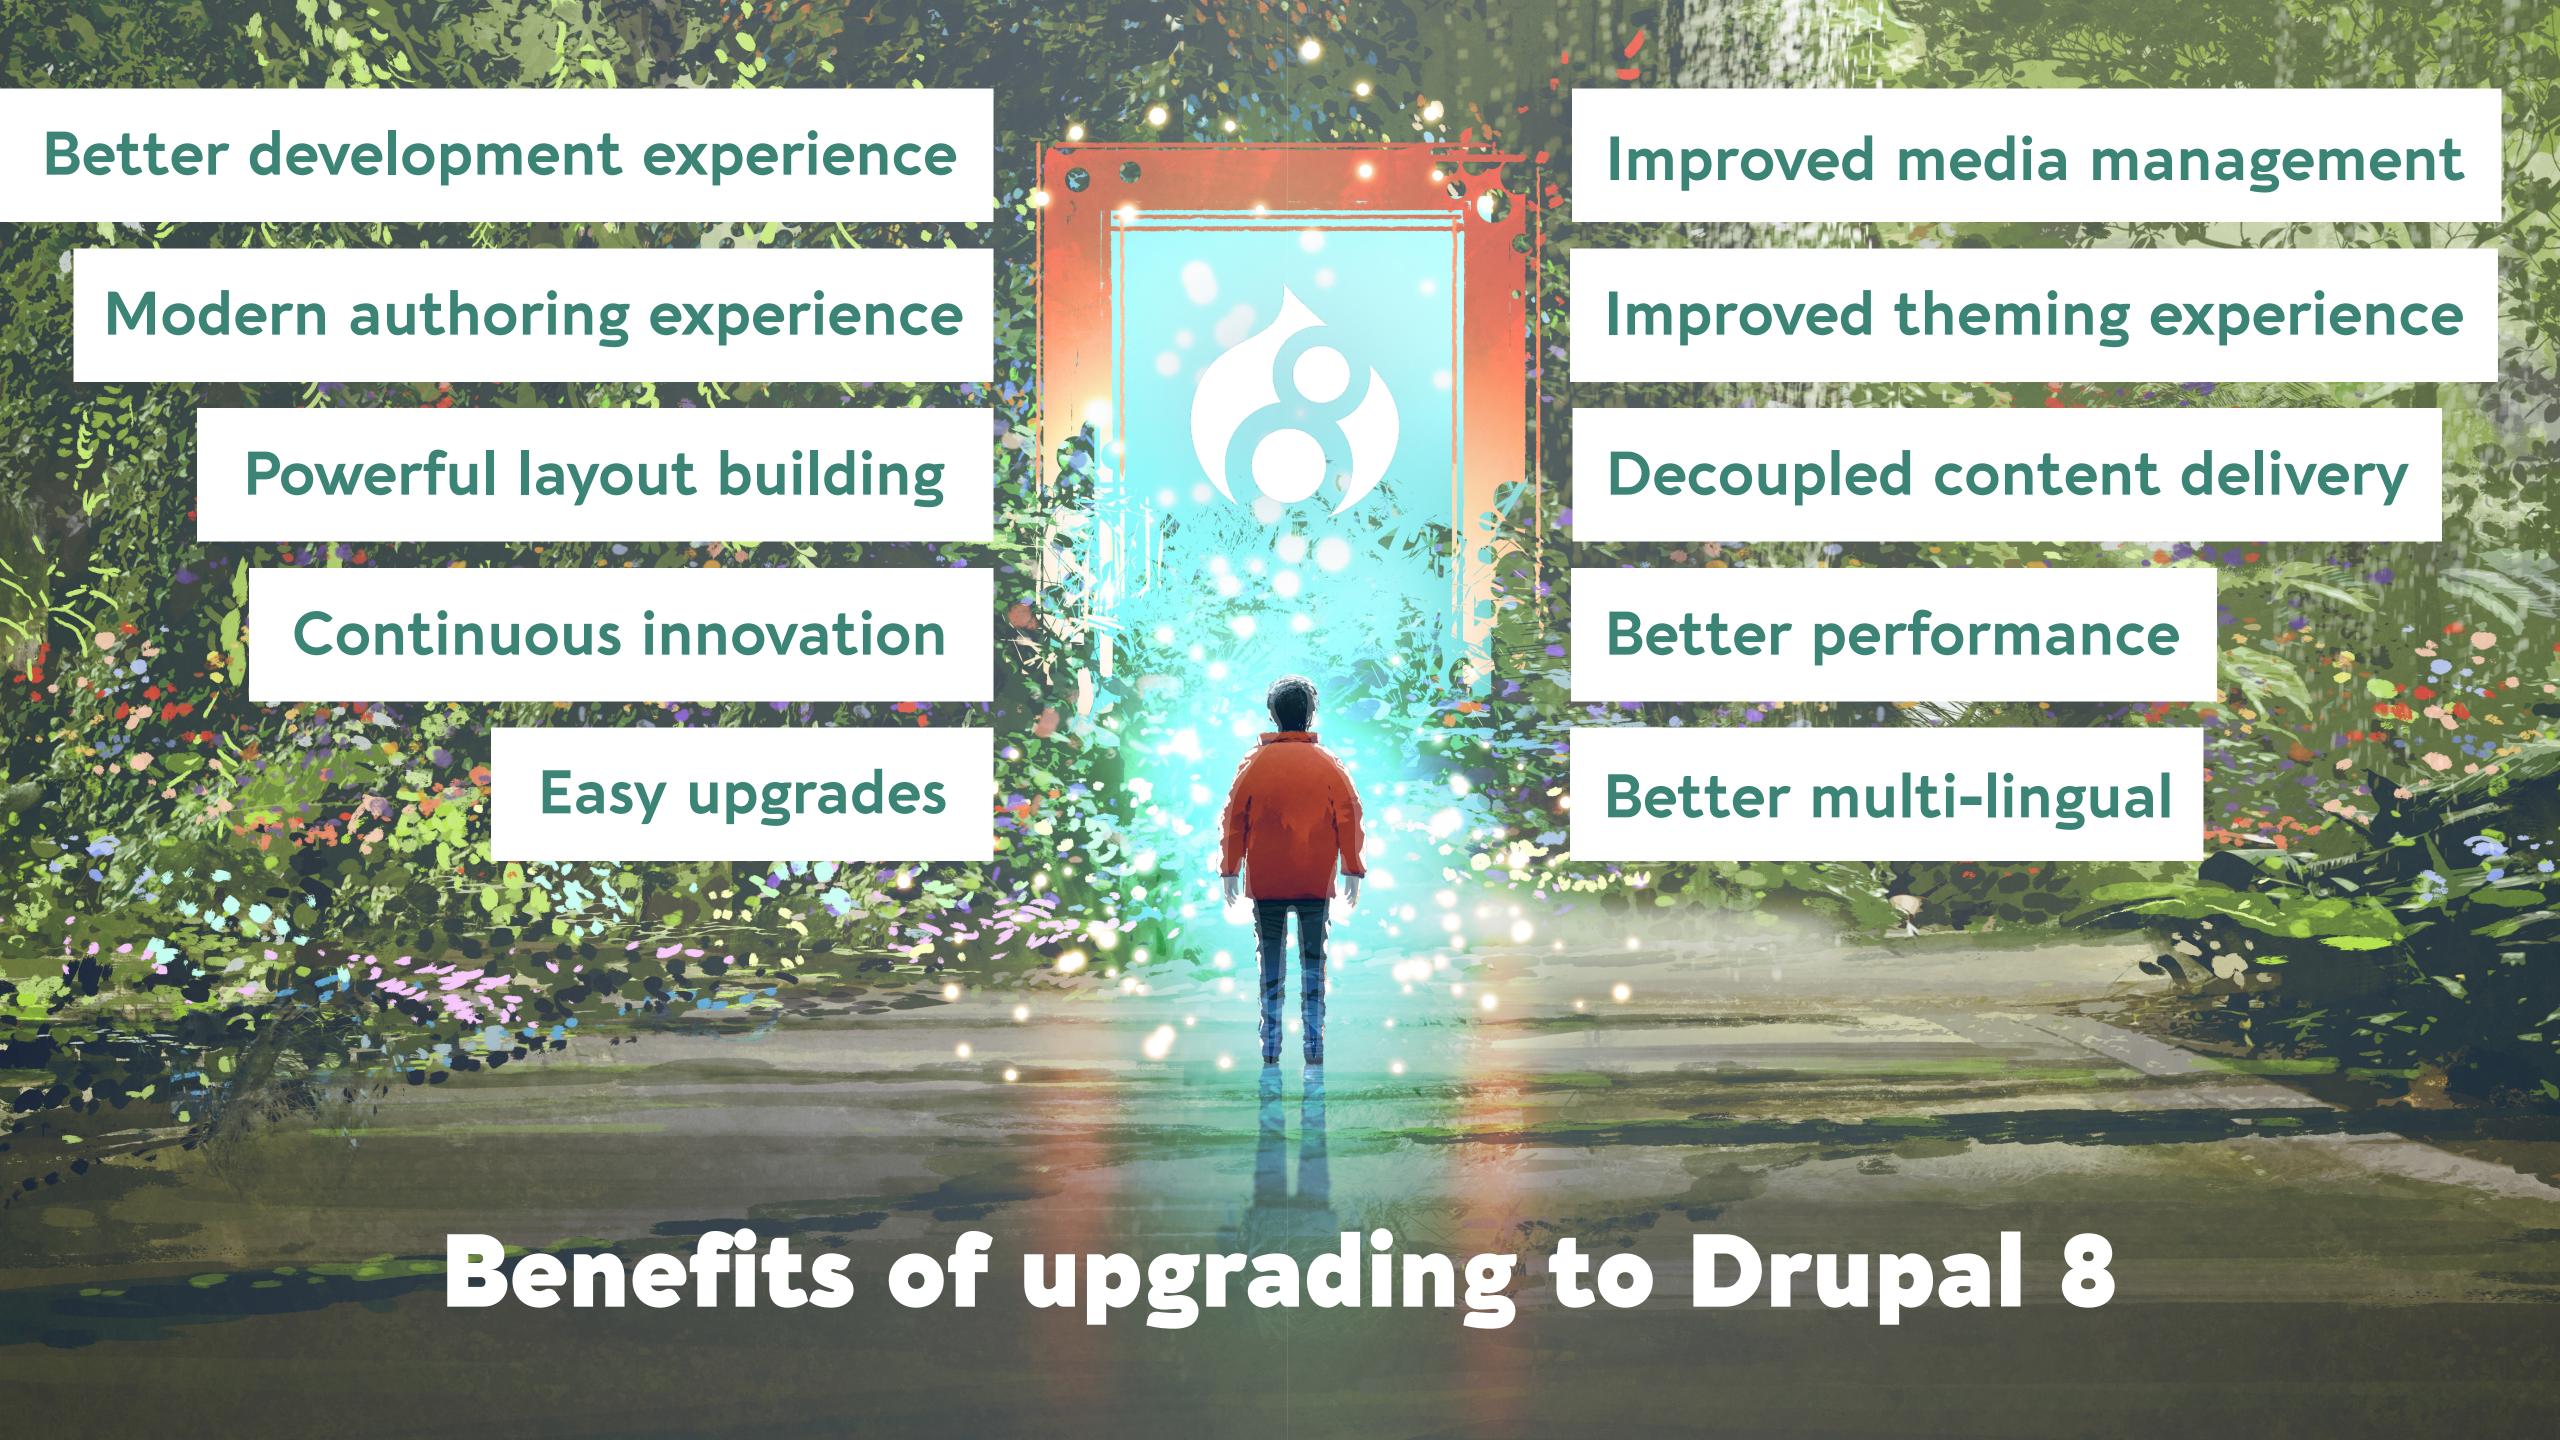

Derek: "We were looking at something that was herculean."

Tools to help upgrade to Drupal 8

Upgrade status module

II. Custom codes

Drupal module upgrader

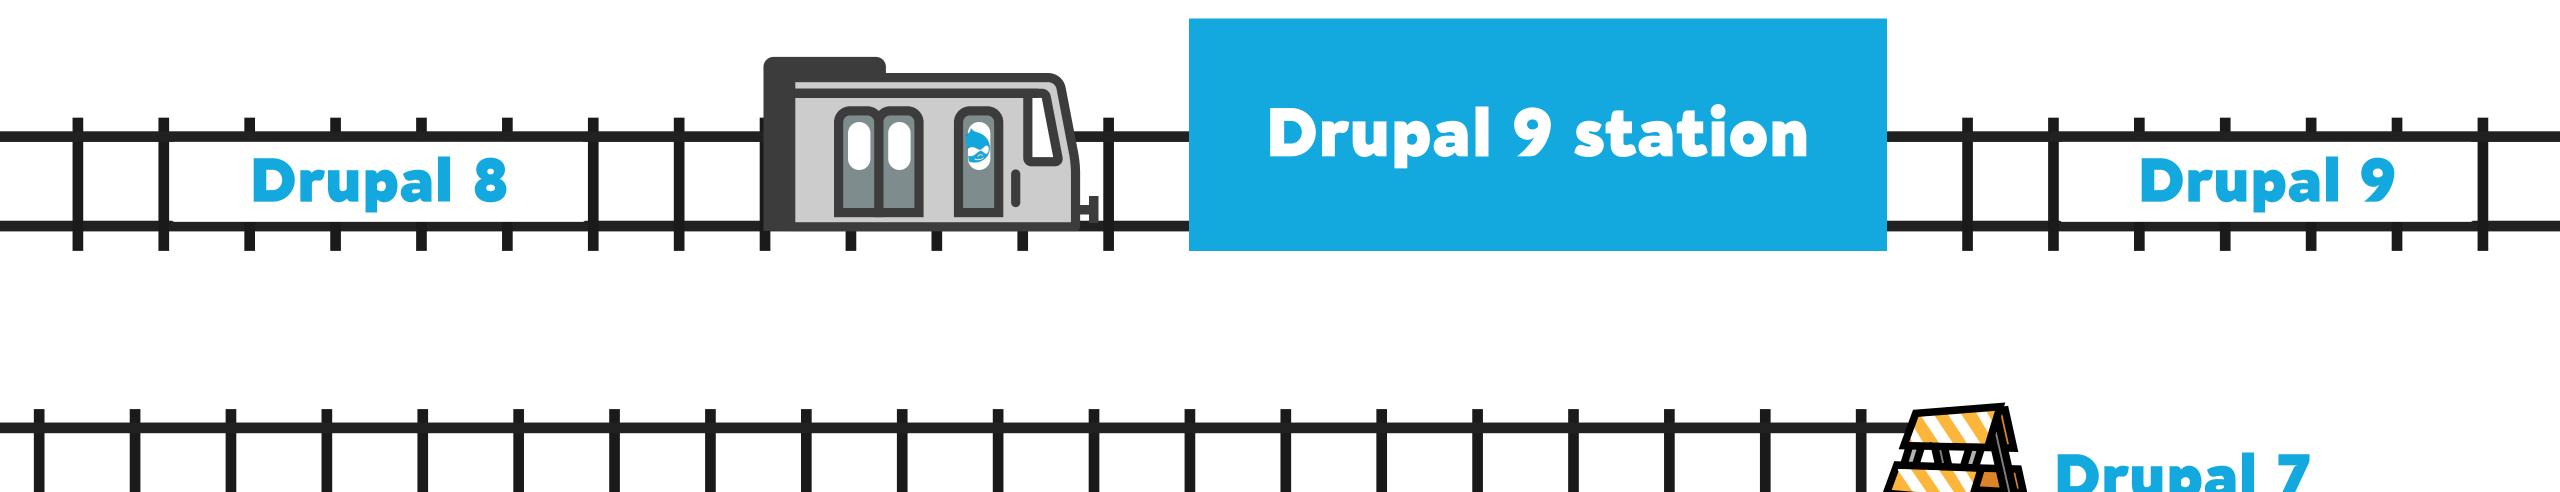

III.
Data/
content

Migrate tools

Question:

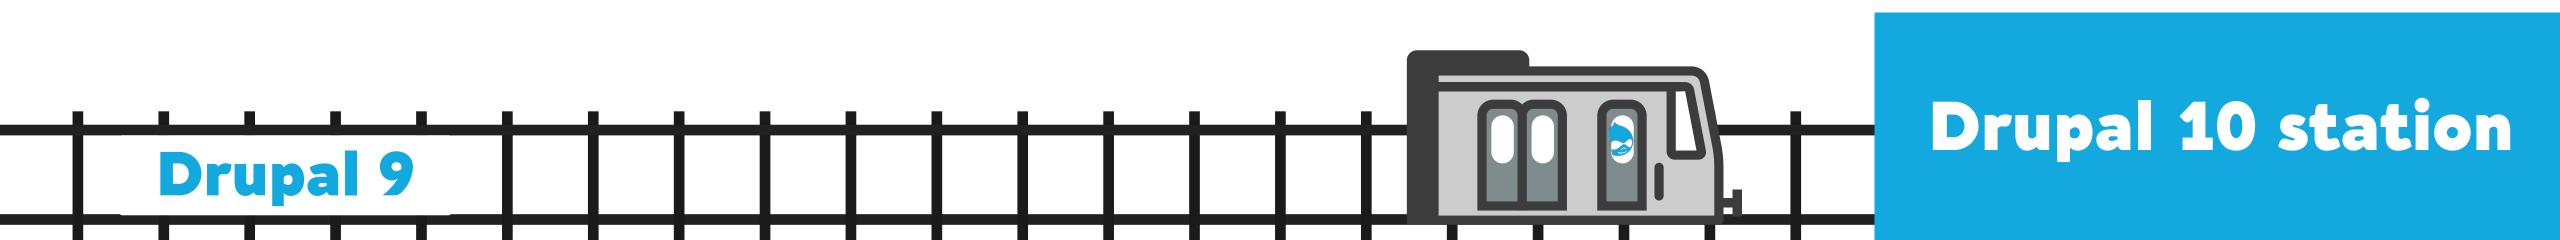

How many people are on Drupal 7 and waiting for Drupal 9?

Once you are on the Drupal 8 track, you will never have to change tracks again

Once you are on the Drupal 8 track, you will never have to change tracks again

Upgrading 7 + 8

Upgrading 8 5 9 Upgrading
7 18

11.

Upgrading 8 9

Drupal 9 will ship in just over one year from today

Targeted for June 2020 (Fallback is December 2020)

Two reasons to release Drupal 9:

1.

Update 3rd party
dependencies for
(i) new improvements and
(ii) security support

2.

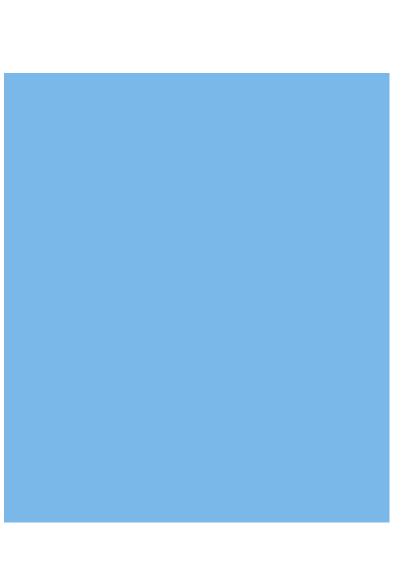

Drop deprecated code for maintainability, performance, developer experience, etc

Drupal innovates

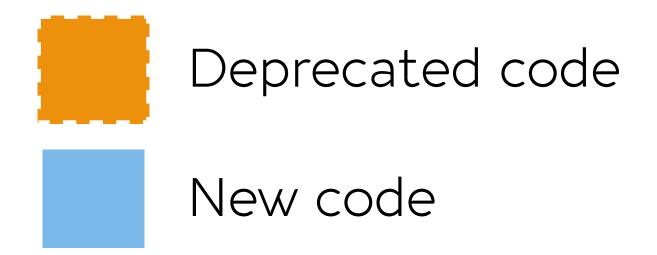

Drupal 8's innovation model

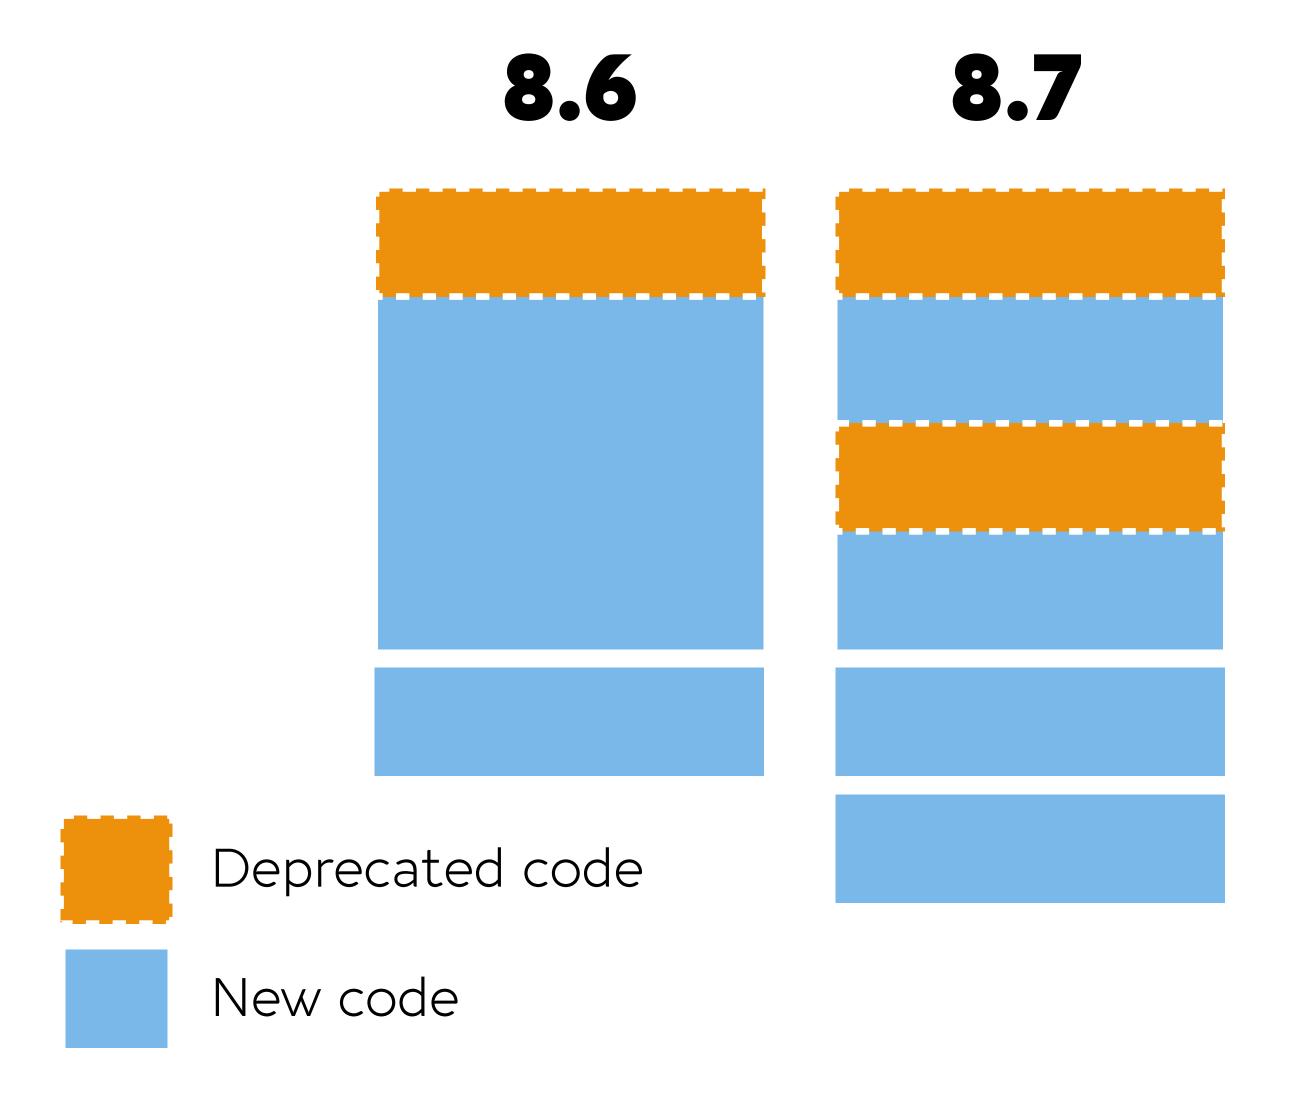

8.6

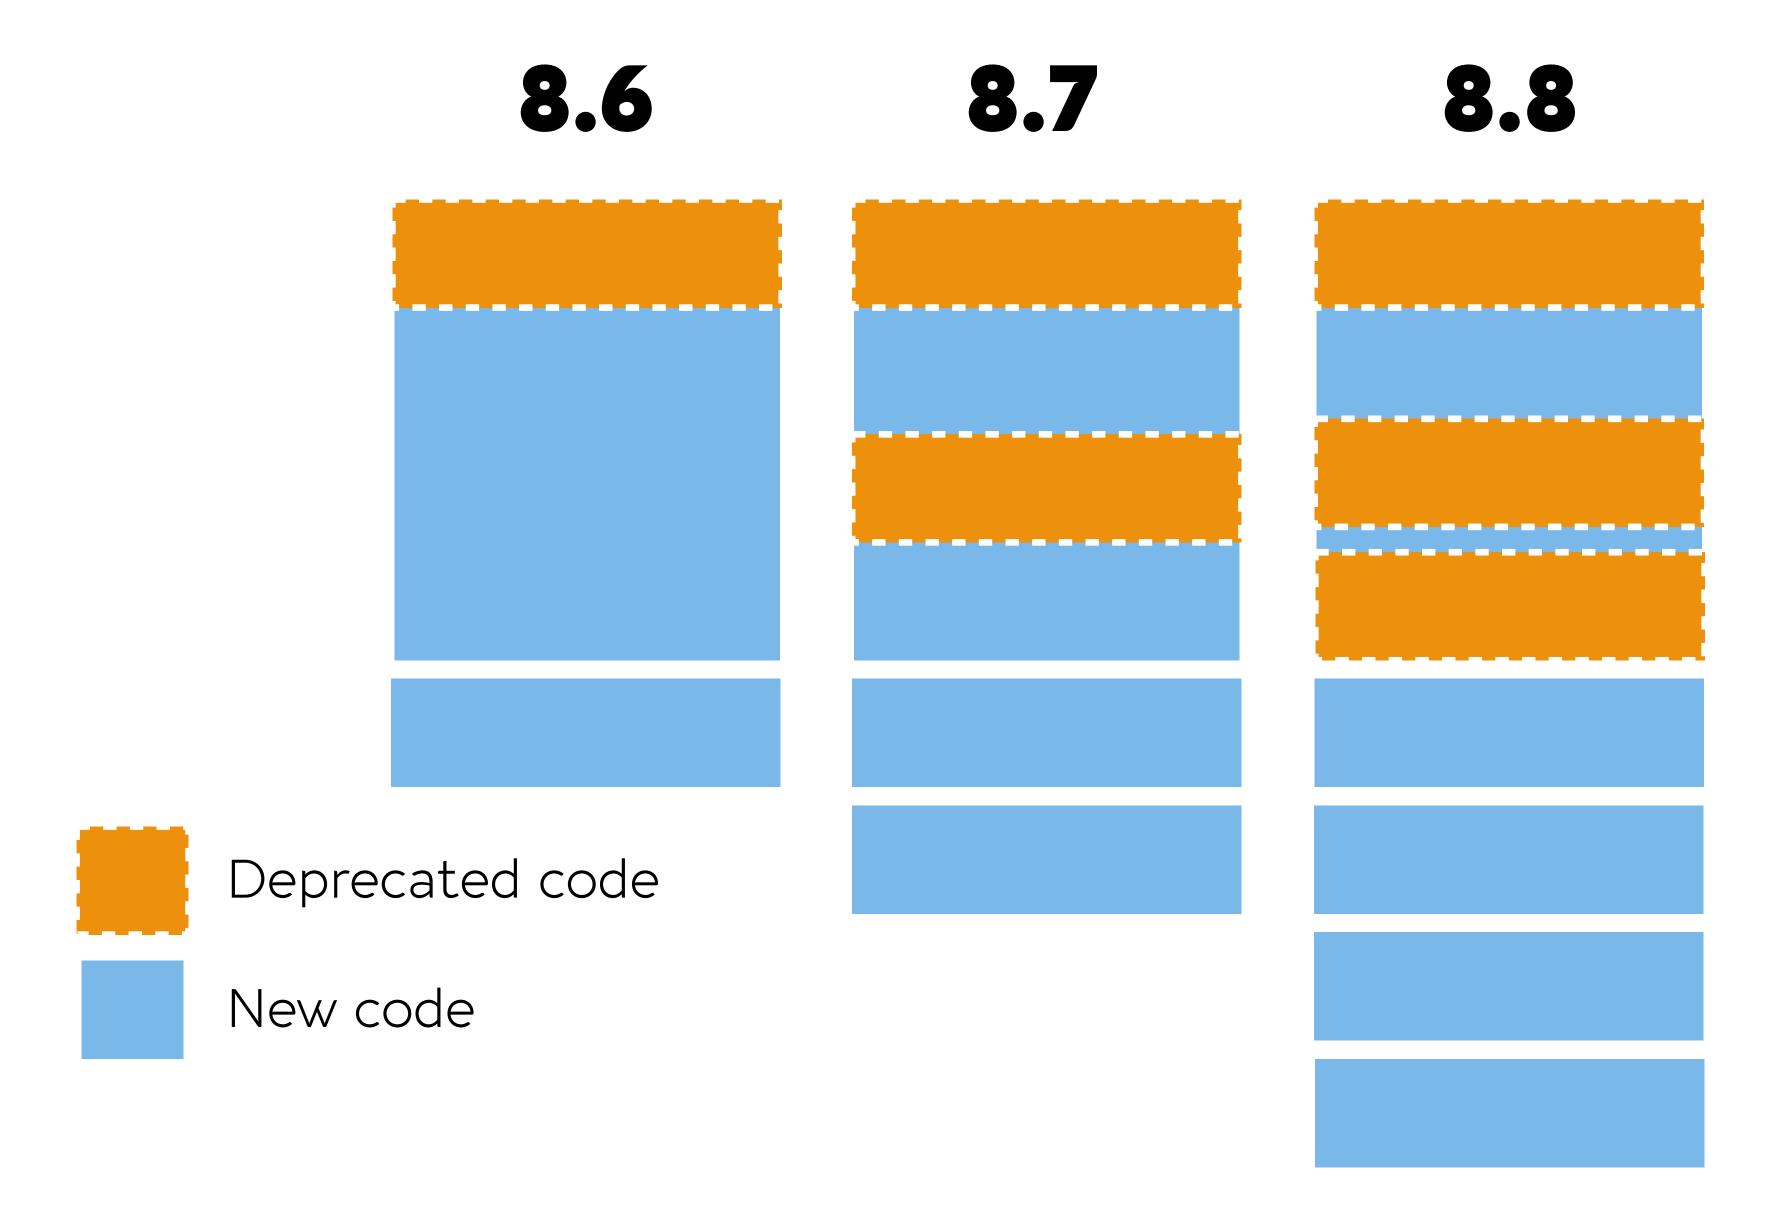

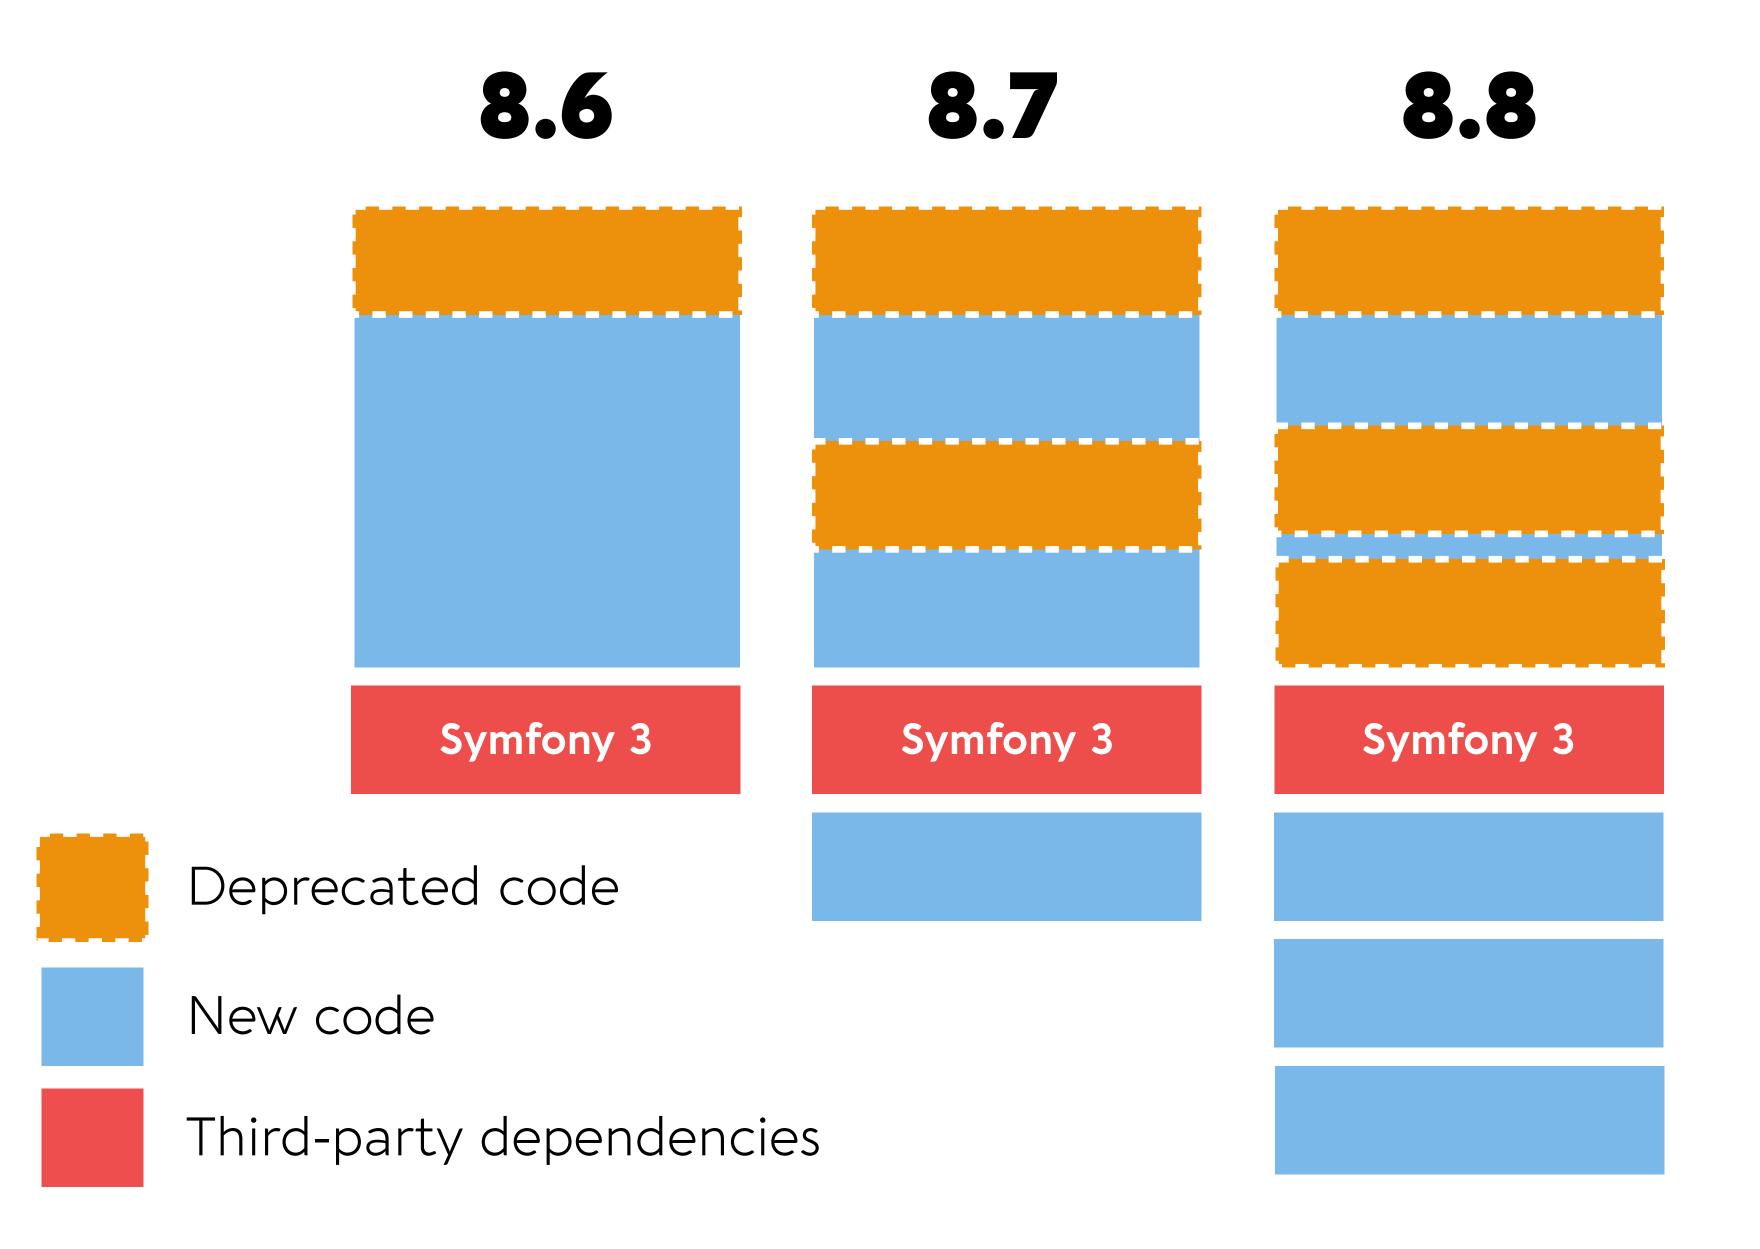

We add new things, we mark things for removal

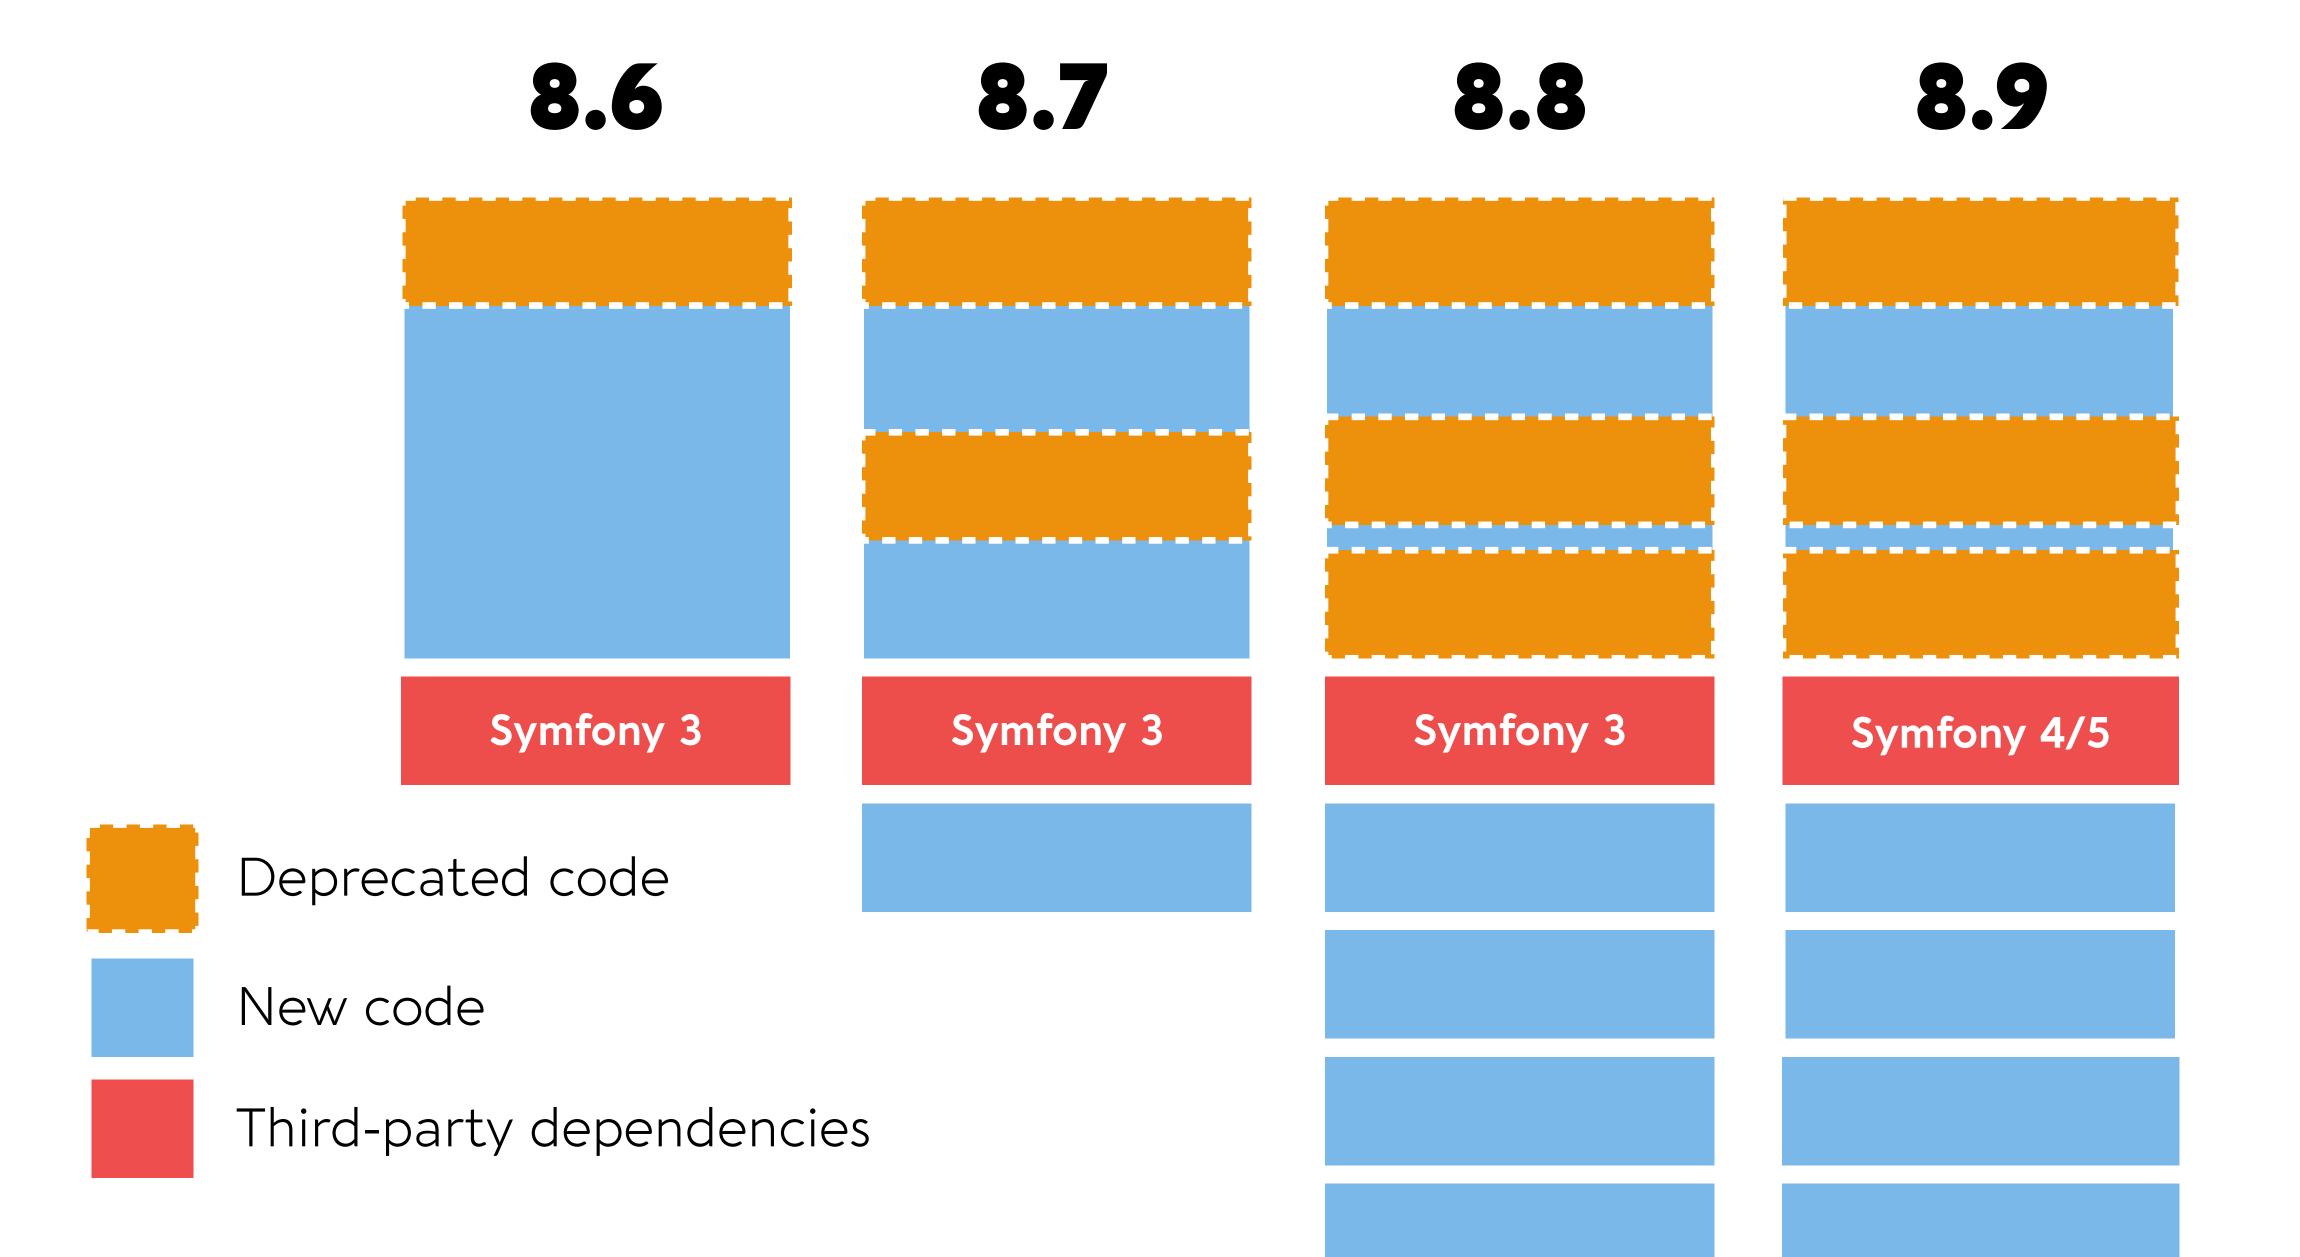

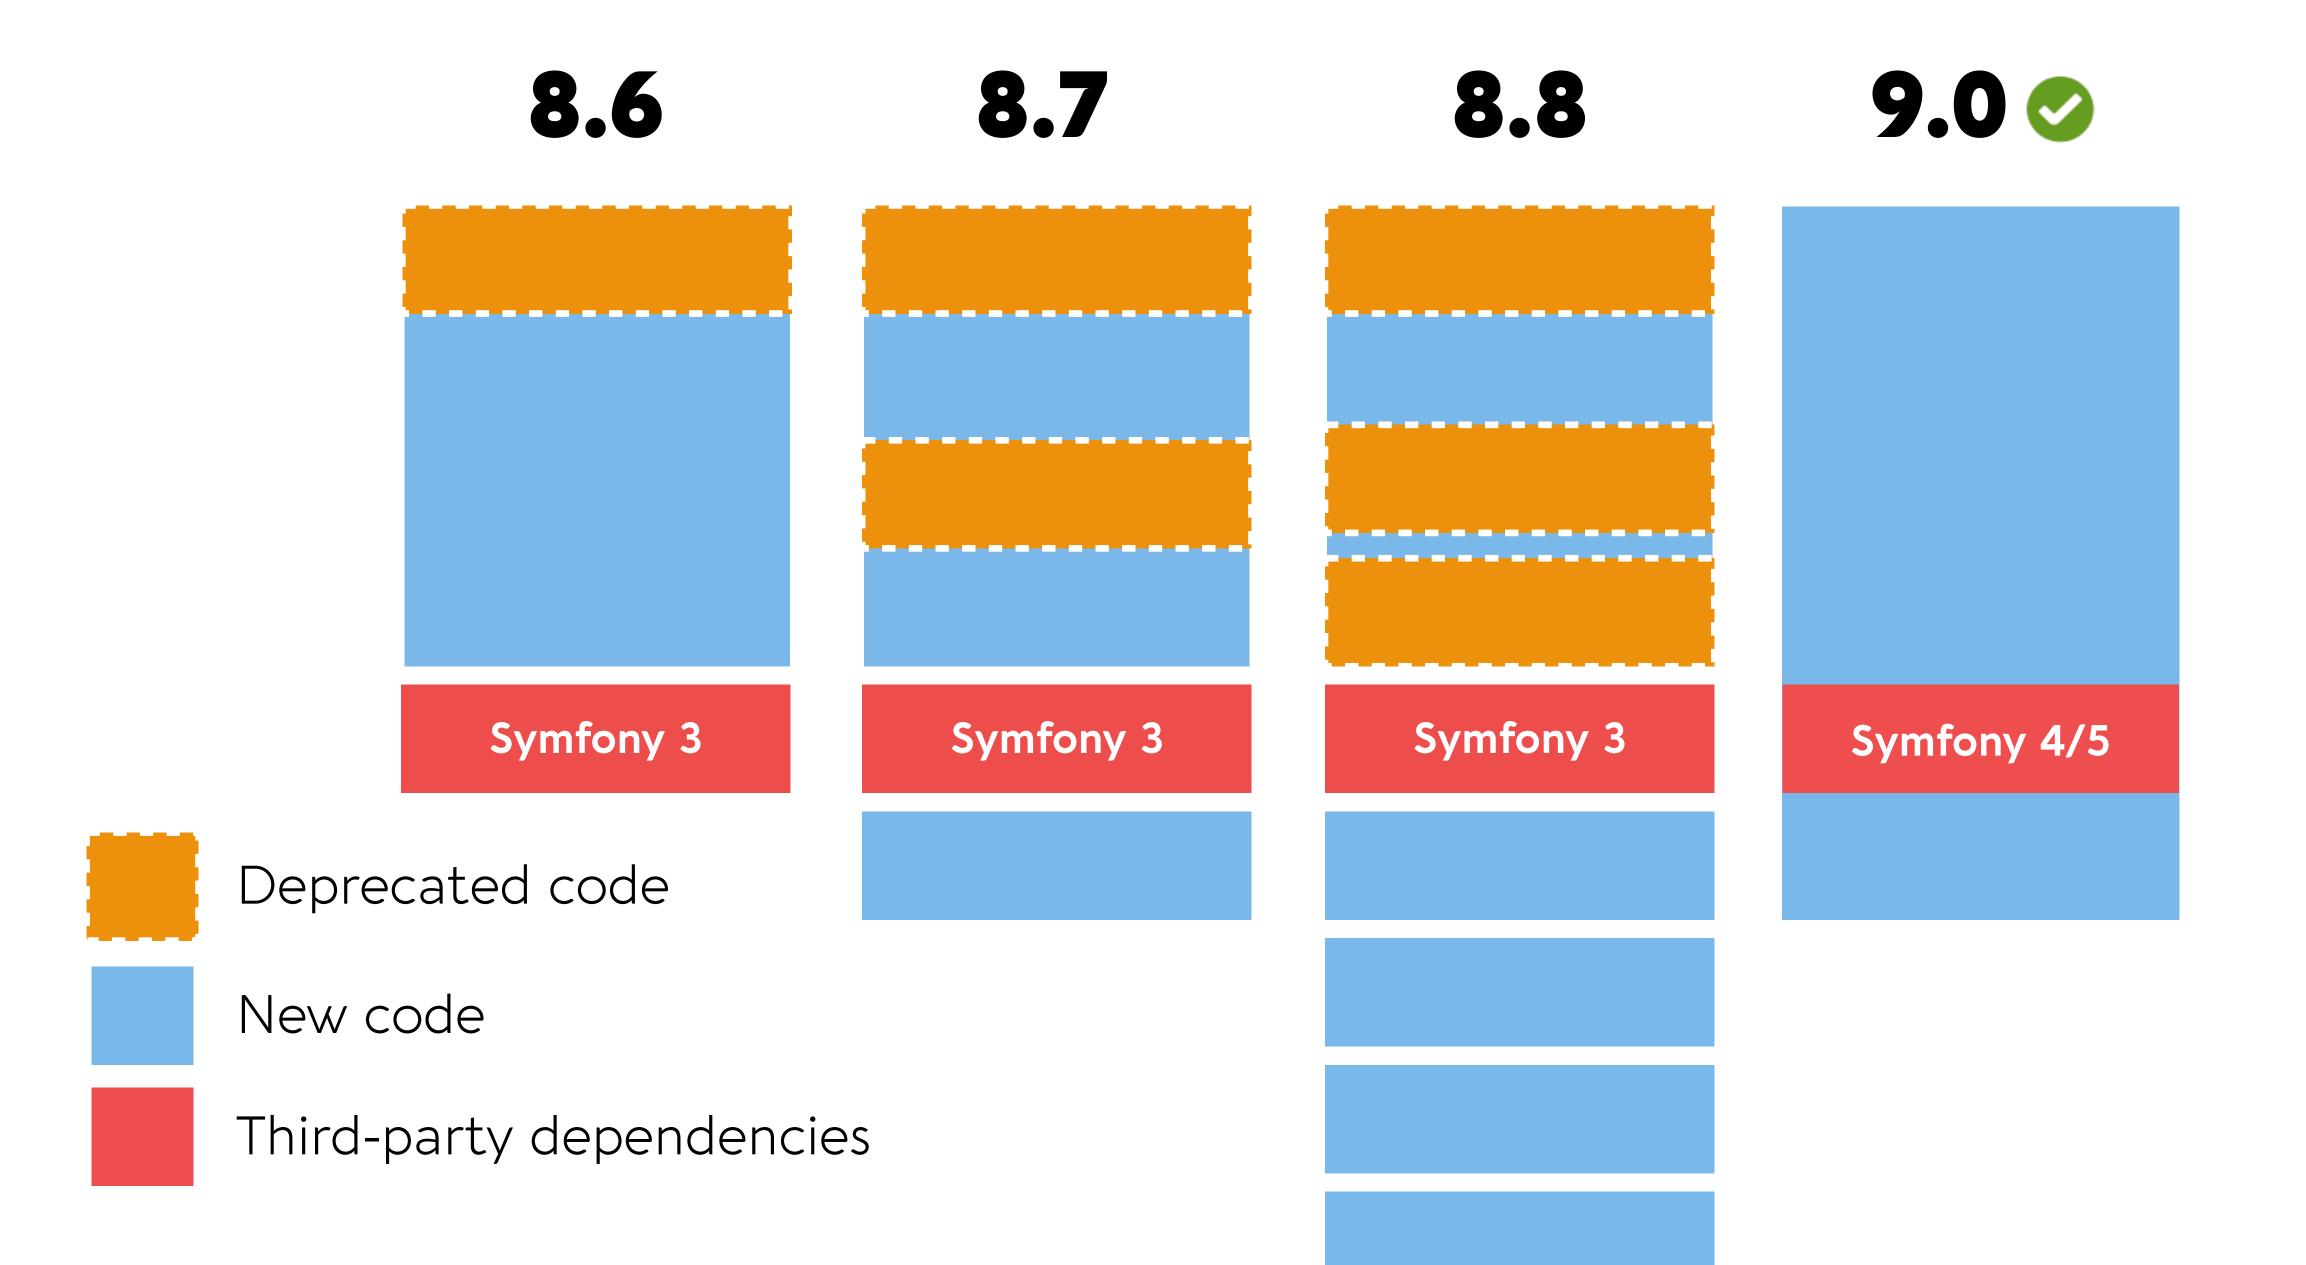

We add new things, we mark things for removal

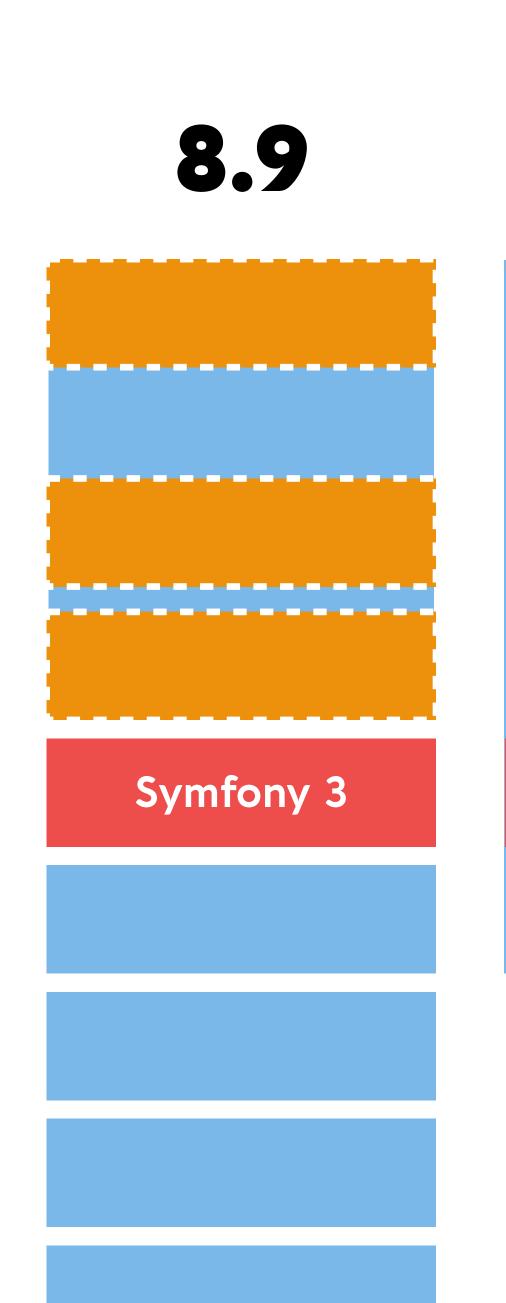

We need to upgrade 3rd party dependencies that will go end-of-life

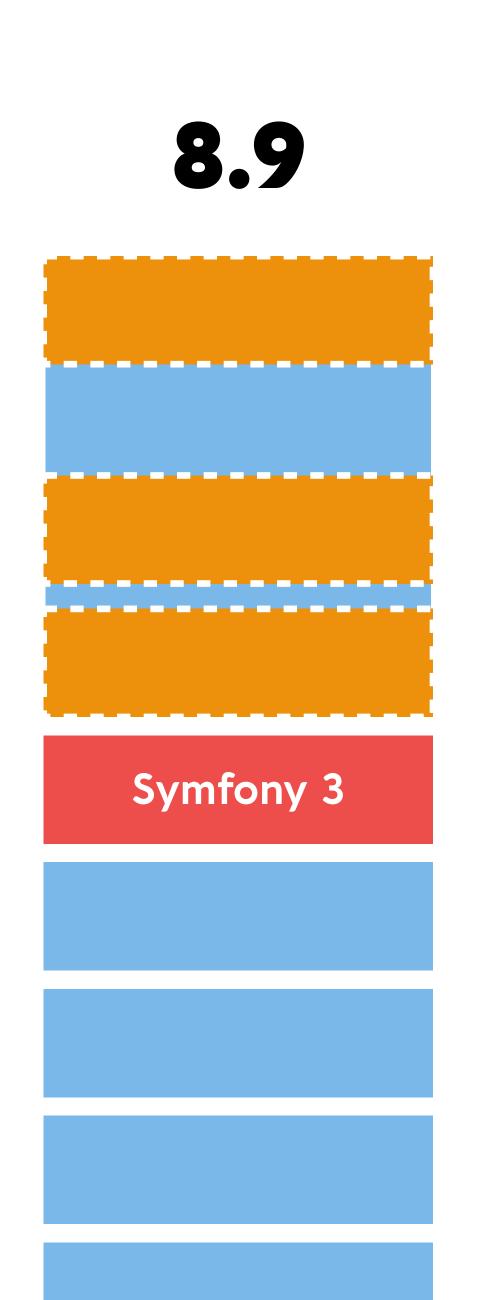

9.0

Symfony 4/5

Drupal 9 =

Drupal 8.9

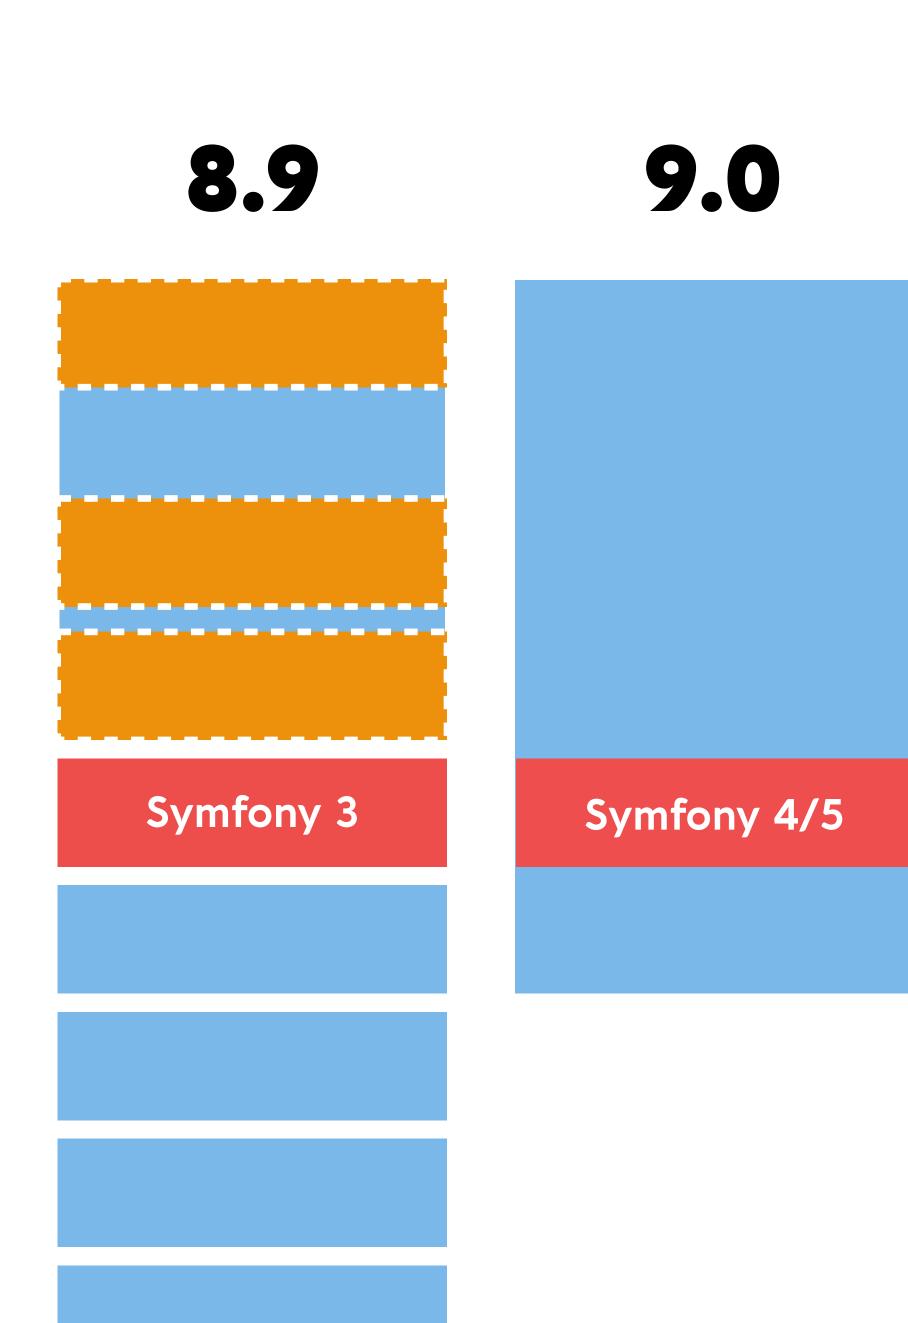

- deprecated code
- + updated 3rd-party dependencies

9.0

Symfony 4/5

Any Drupal 8 module that does not use deprecated code will continue to work with Drupal 9

The upgrade from Drupal 8 to Drupal 9 will be **easy!**

Before:

Drupal 7 to Drupal 8

- Content needs to be migrated
- Code requires to be rewritten

After:

Drupal 8 to Drupal 9

- ✓ Content is already ready
- ✓ Code continues to work*

Before:

Drupal 7 to Drupal 8

HARD

After:
Drupal 8 to Drupal 9

EASY

What is deprecated code?

Example of deprecated code:

Before

```
file_unmanaged_copy($source, $destination);
```

After

```
\Drupal::service('file_system')->copy($source, $destination);
```

* Assuming no deprecated code is used

How do I know if I use deprecated code?

drupal\$

Thanks Make Command line tool

github.com/mglaman/drupal-check

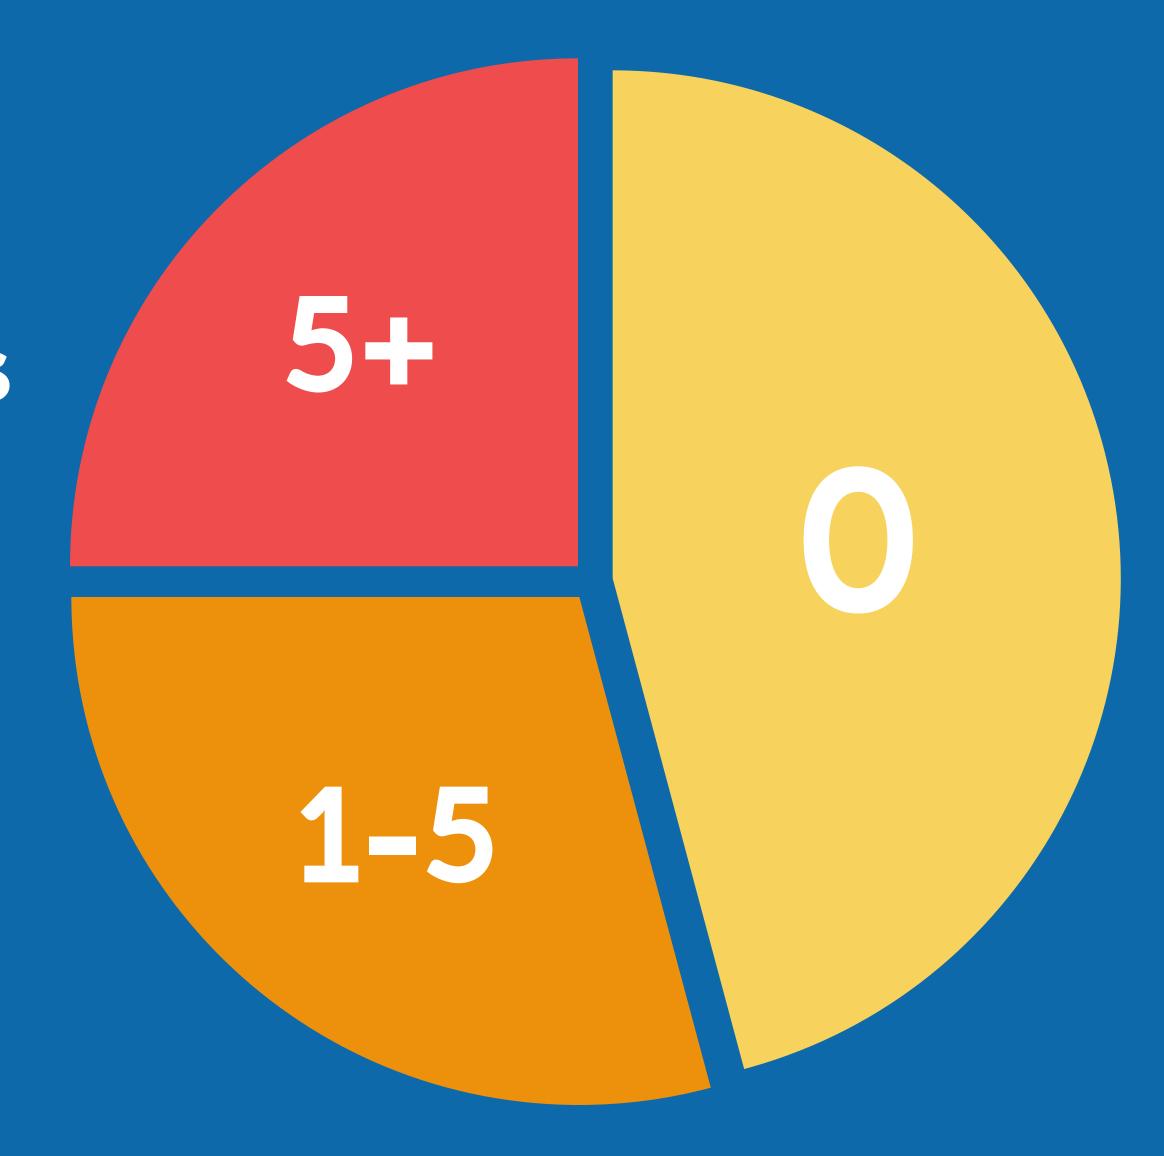

2. In sixe solution

drupal.org/project/upgrade_status

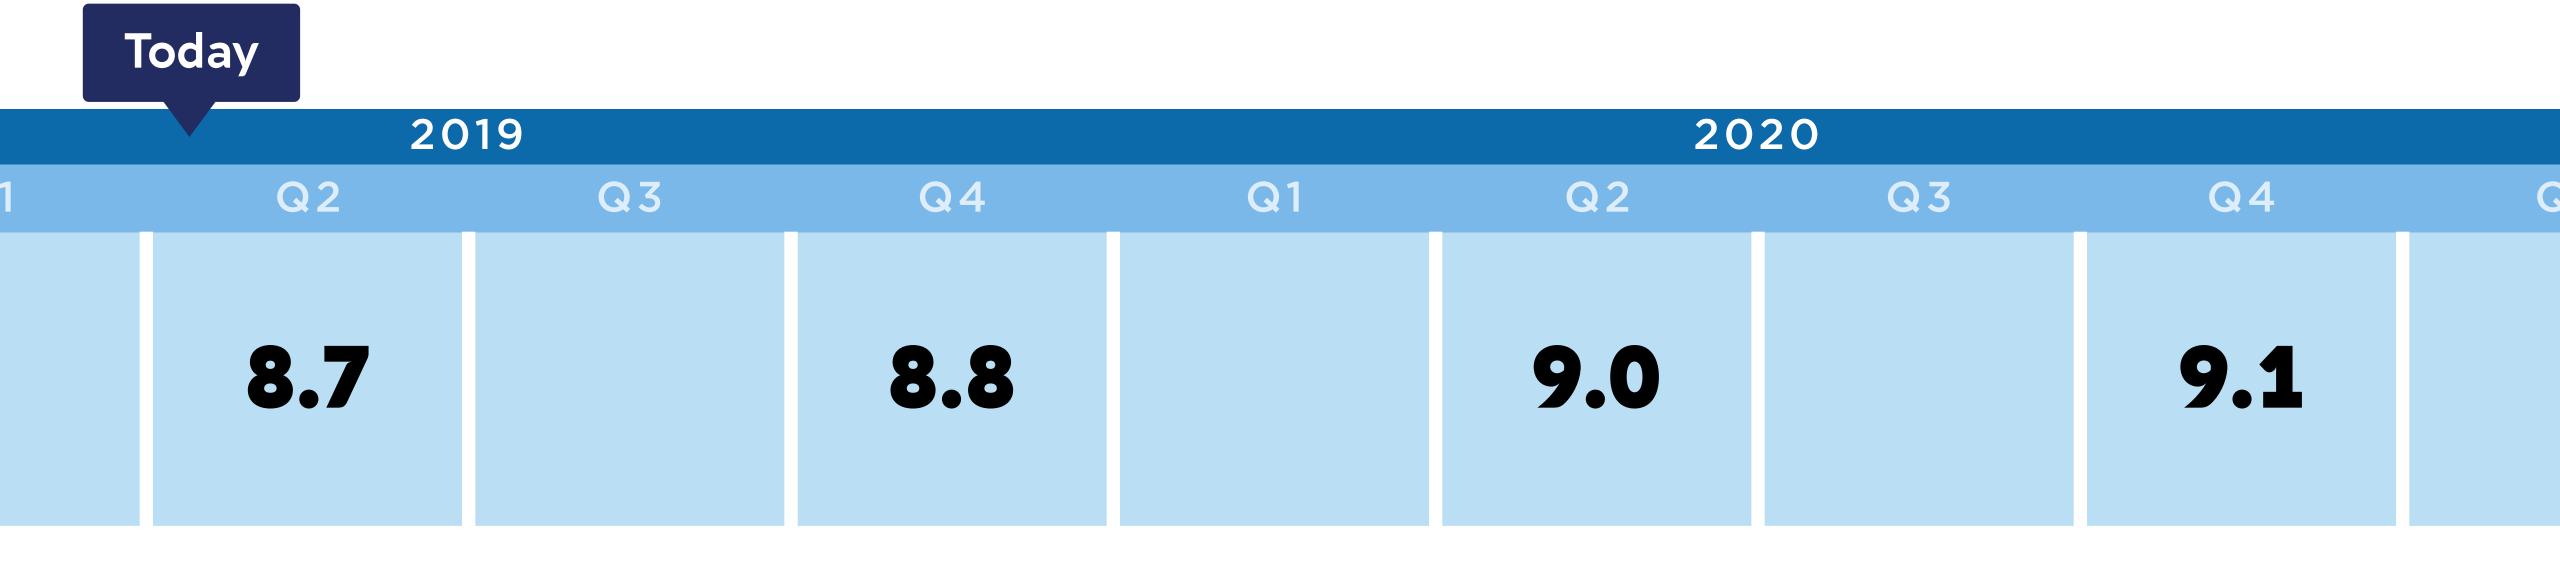

Number of deprecations (per module):

Dwayne McDaniel (Pantheon) analyzed all ~7,000 contributed module for Drupal 8 using drupal-check

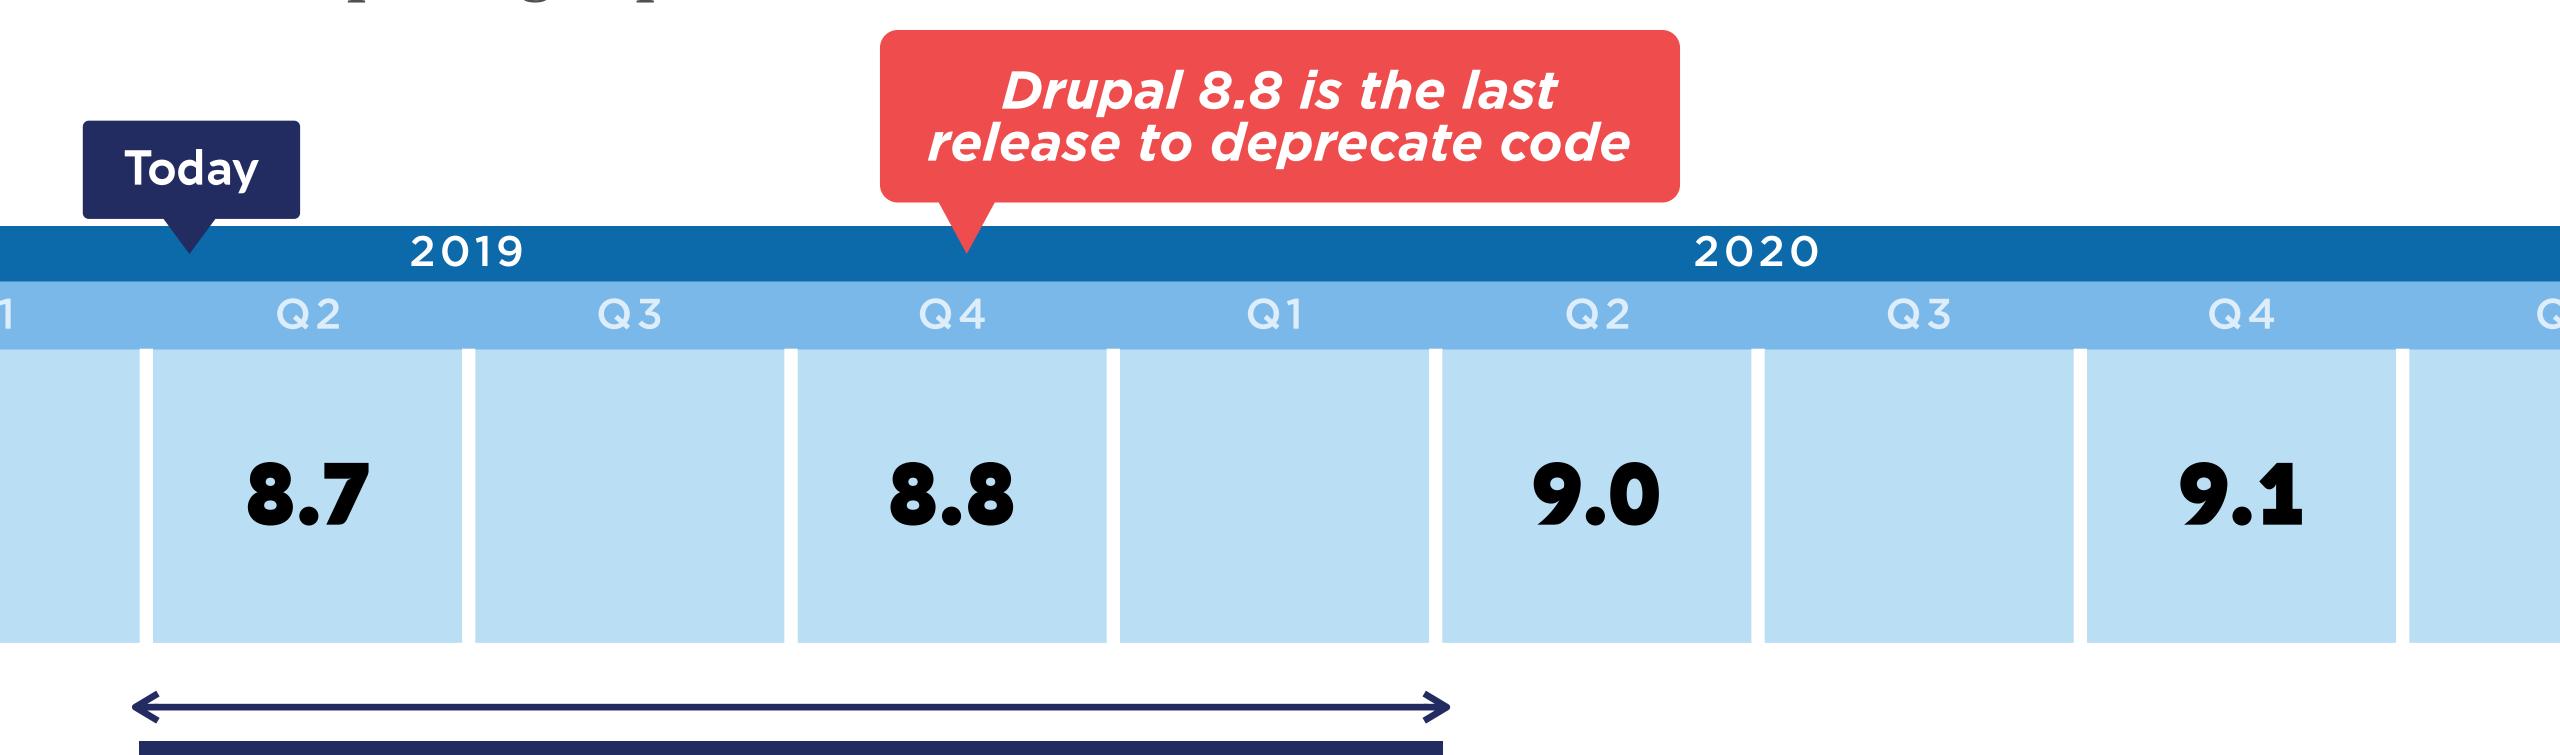

Most of them are search + replace (I did this on my own site dri.es)

Let's stop using deprecated code in core, contributed and custom modules

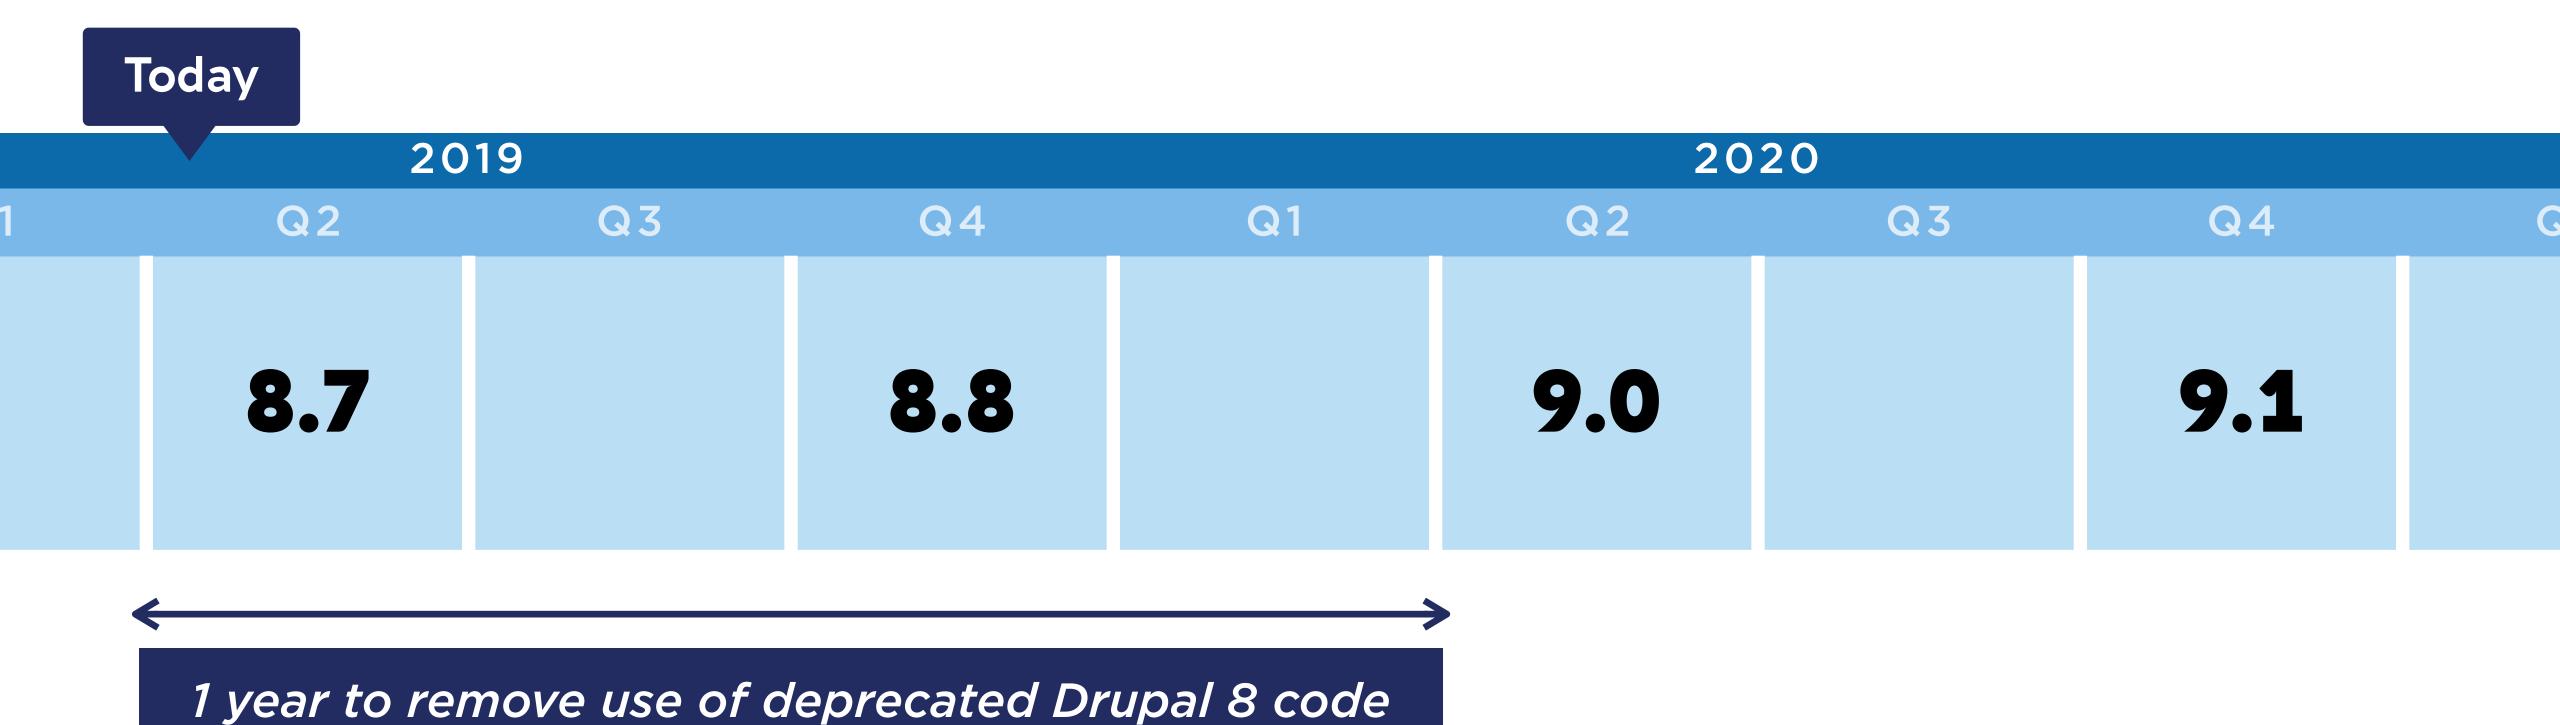

Let's stop using deprecated code in core, contributed and custom modules

1 year to remove use of deprecated Drupal 8 code

Let's extend our tools to cover Twig and JavaScript code as well

The upgrade to Drupal 9 will be easy. We have to get the word out.

Upgrading 7 + 8

Upgrading 8 P 9

Example minor or patch update:

```
1. git pull origin master
              vagrant up
              drush sql-sync @mysite.prod @mysite.local
              composer require drupal/core: ^8.6.6 --upda
              add customizations back to core files
           6. review changes
Update
           7. drush cache:rebuild
           8. drush update:db -y
              drush cache: rebuild
           10. drush config:export -y
           11. git add -A "Updating to Drupal core 8.6.6."
           12. git tag 1.0.1
           13. git push origin master --tags
           14. backup database
           15. drush @mysite.prod cset system.maintenance mode 1
           16. deploy new 1.0.1 tag
           17. drush @mysite.prod cache:rebuild
Deploy
           18. drush @mysite.prod update:db -y
           19. drush @mysite.prod cache:rebuild
           20. drush @mysite.prod config:import -y
           21. drush cset system.maintenance mode 0
           22. drush @mysite.prod cache:rebuild
```

Many steps

Requires developer expertise

Can be required multiple times a month!

Code

Database

Config

Let's renew our focus on automated updates

We need better Composer support in core and contrib

We need people to help and an initiative coordinator

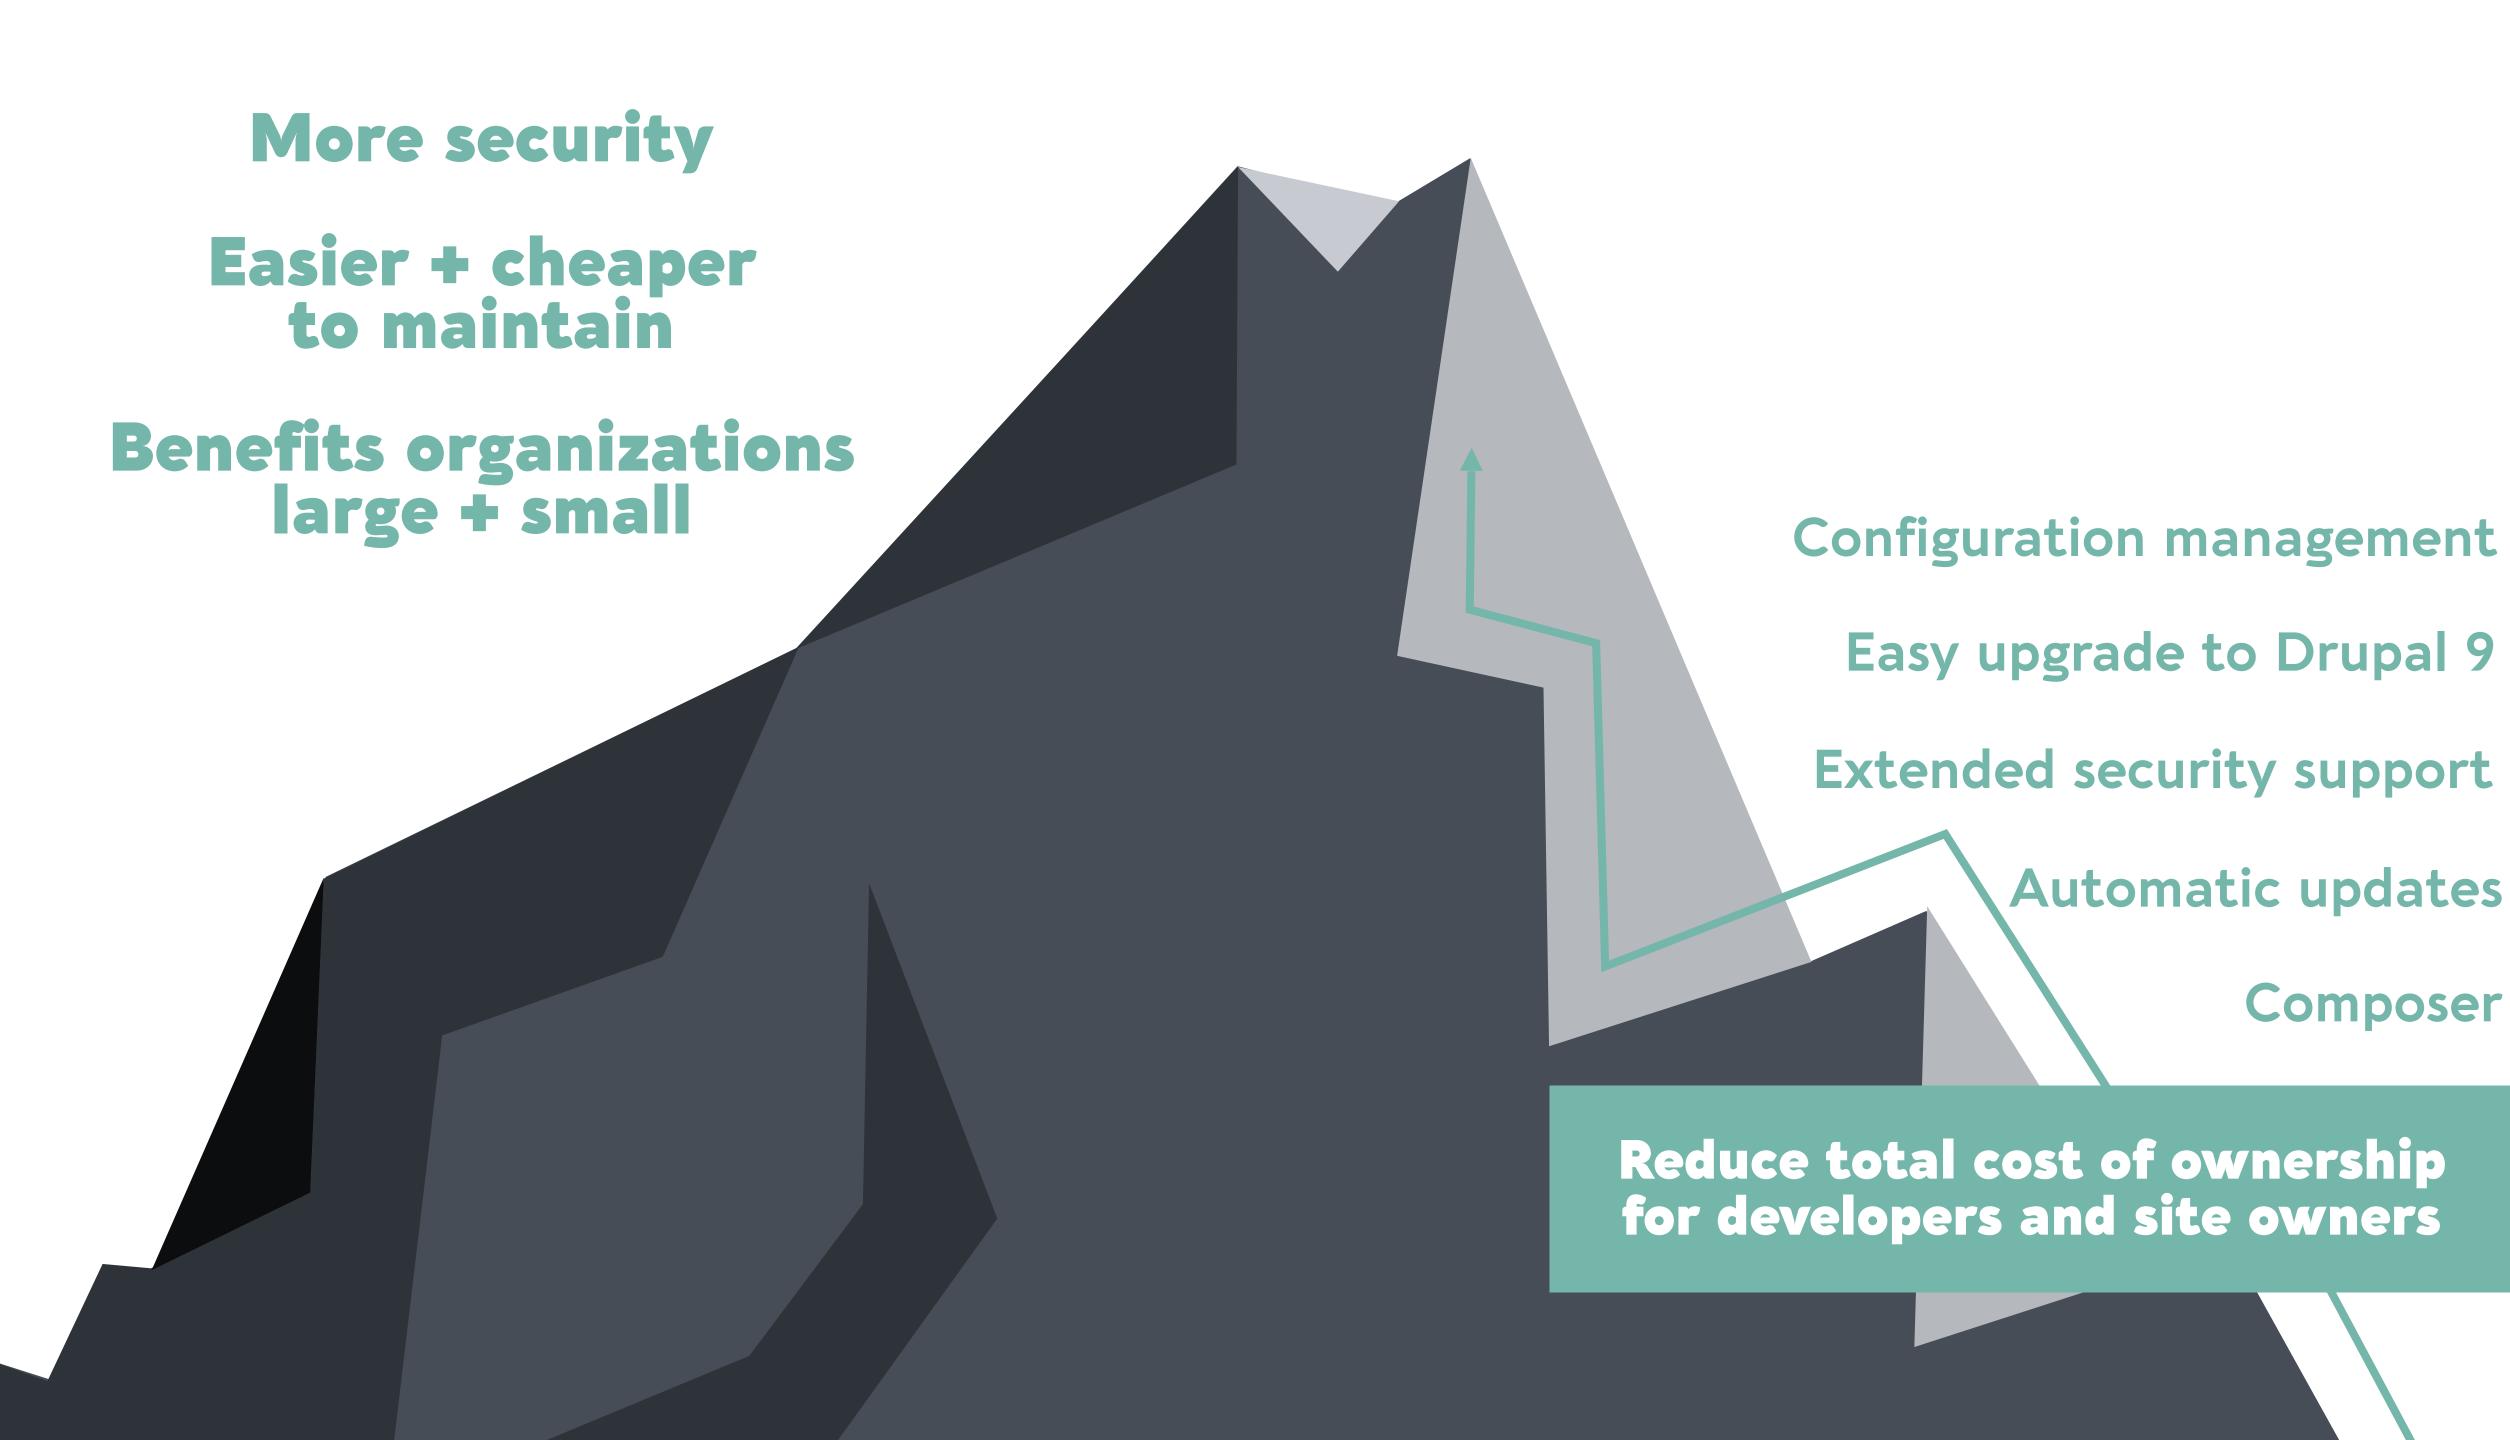

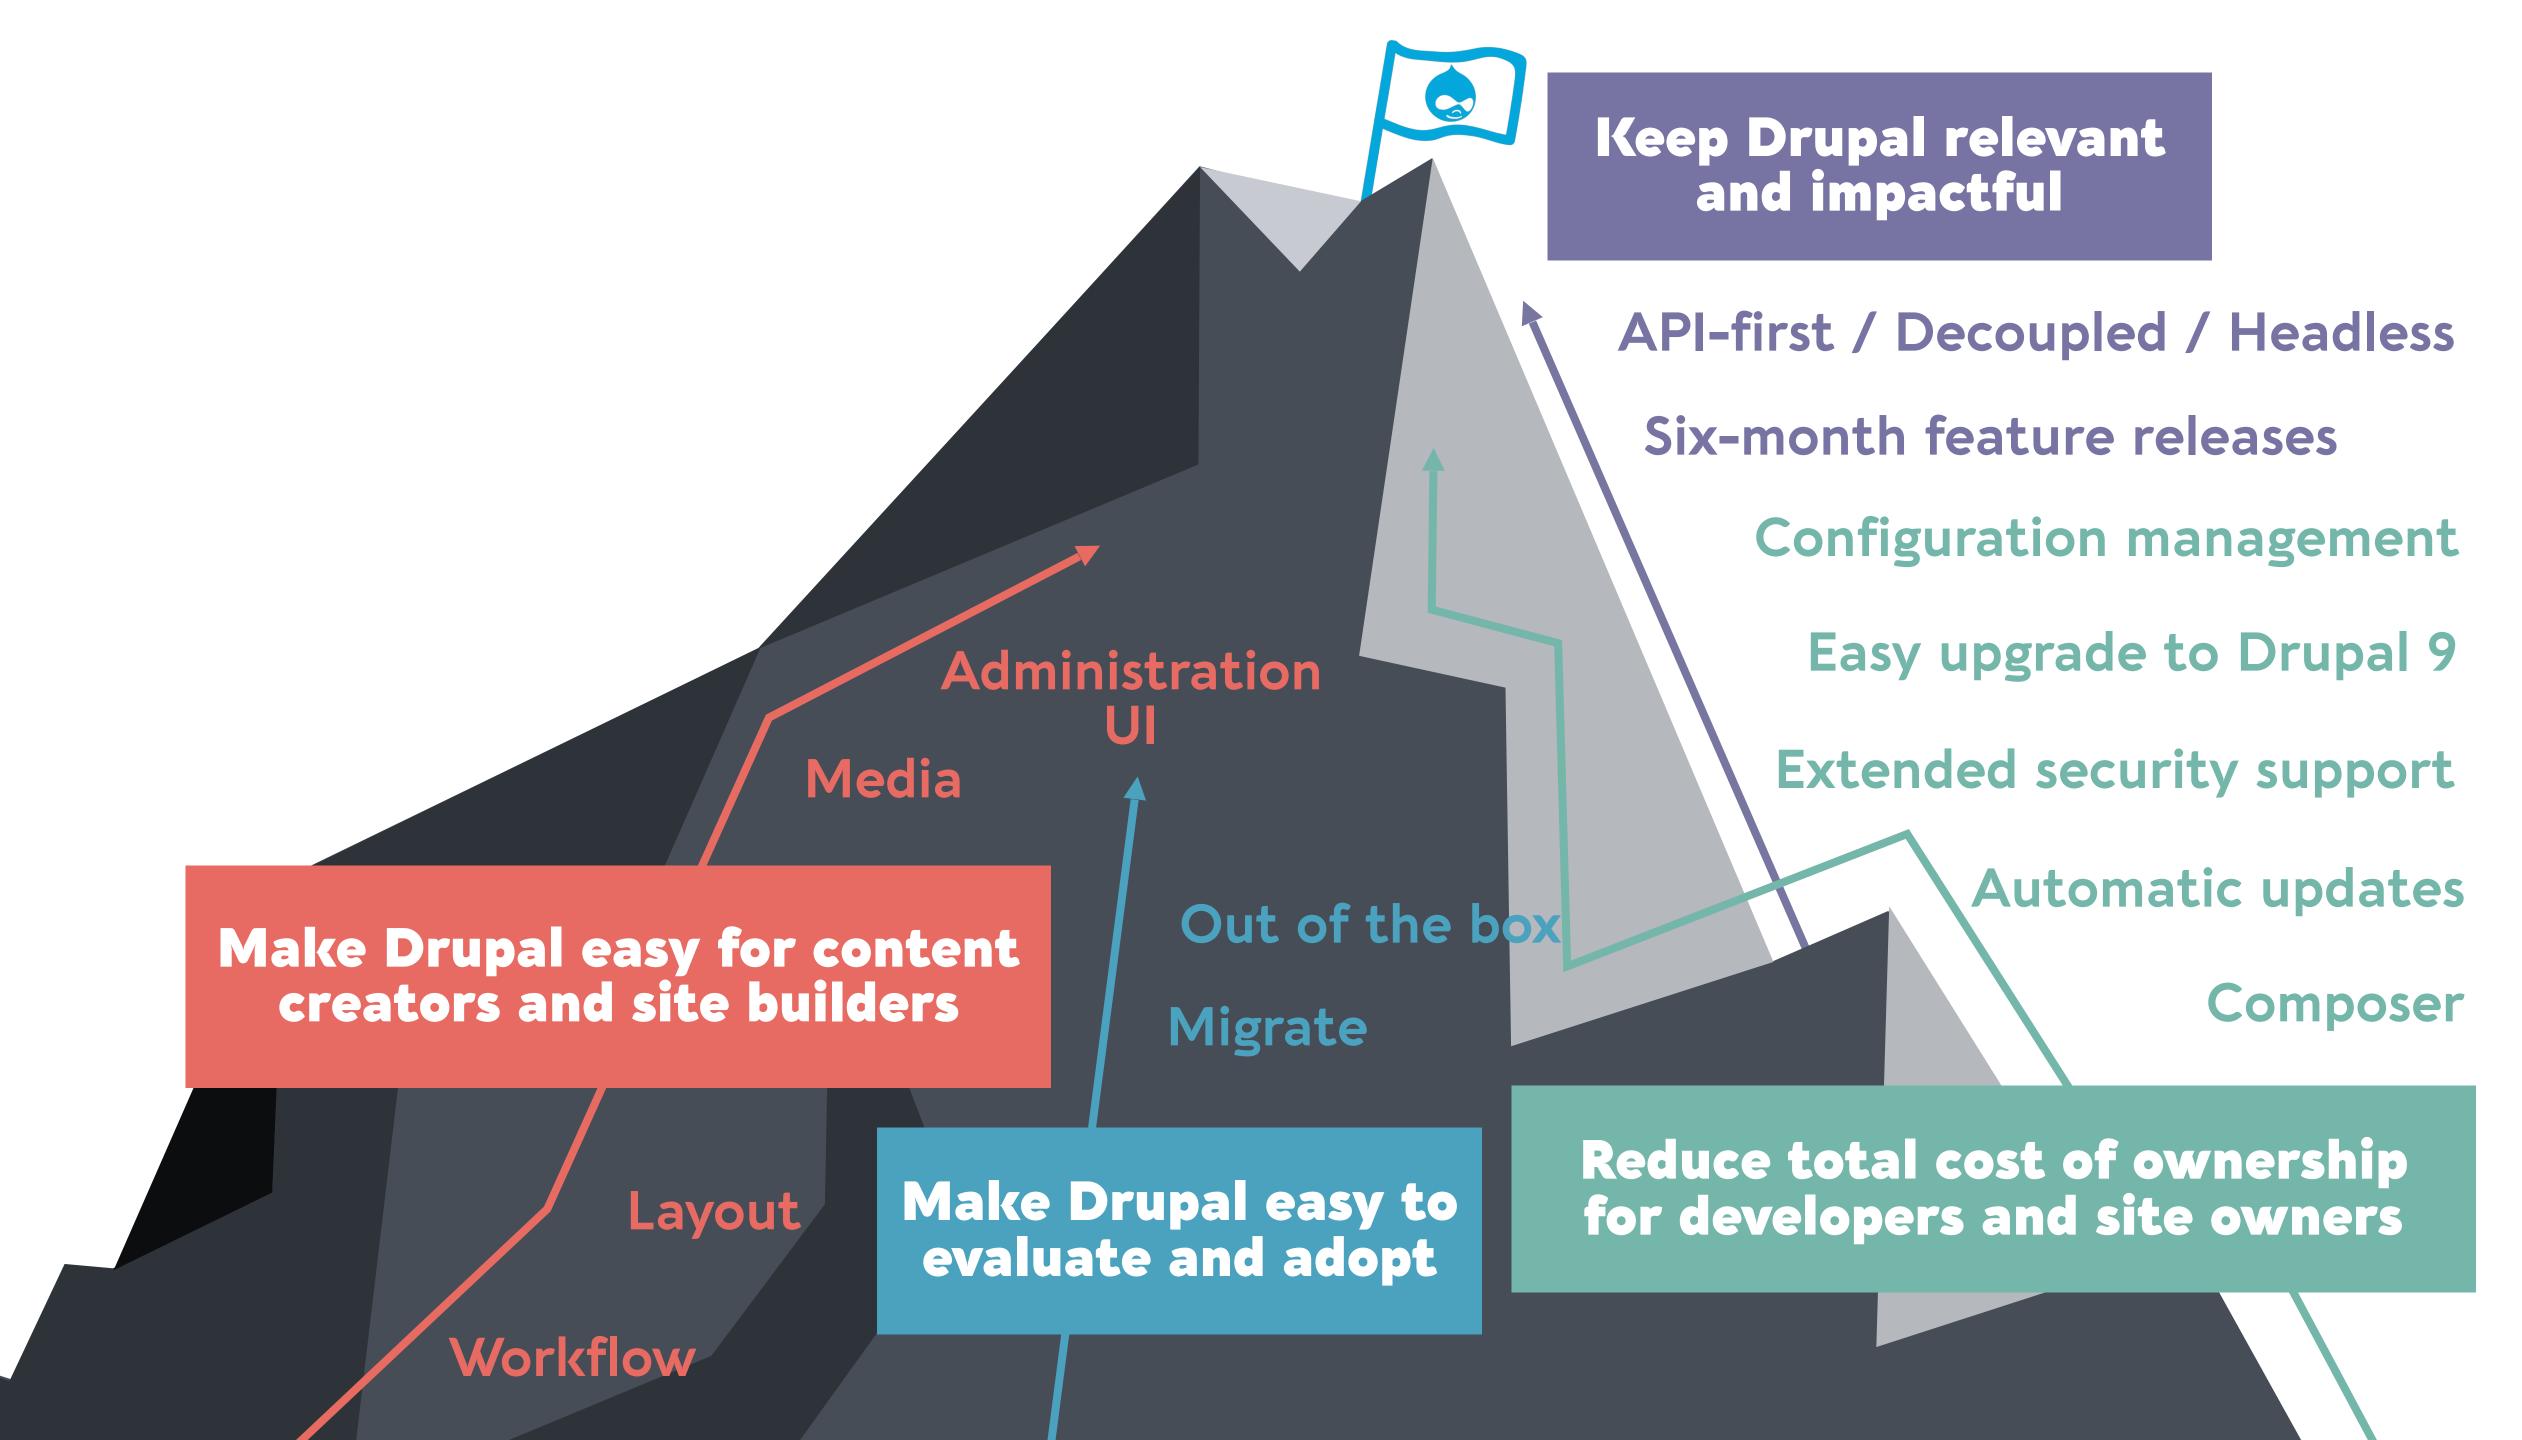

Let's renew our focus on automated updates

We need better Composer support in core and contrib

We need people to help and an initiative coordinator

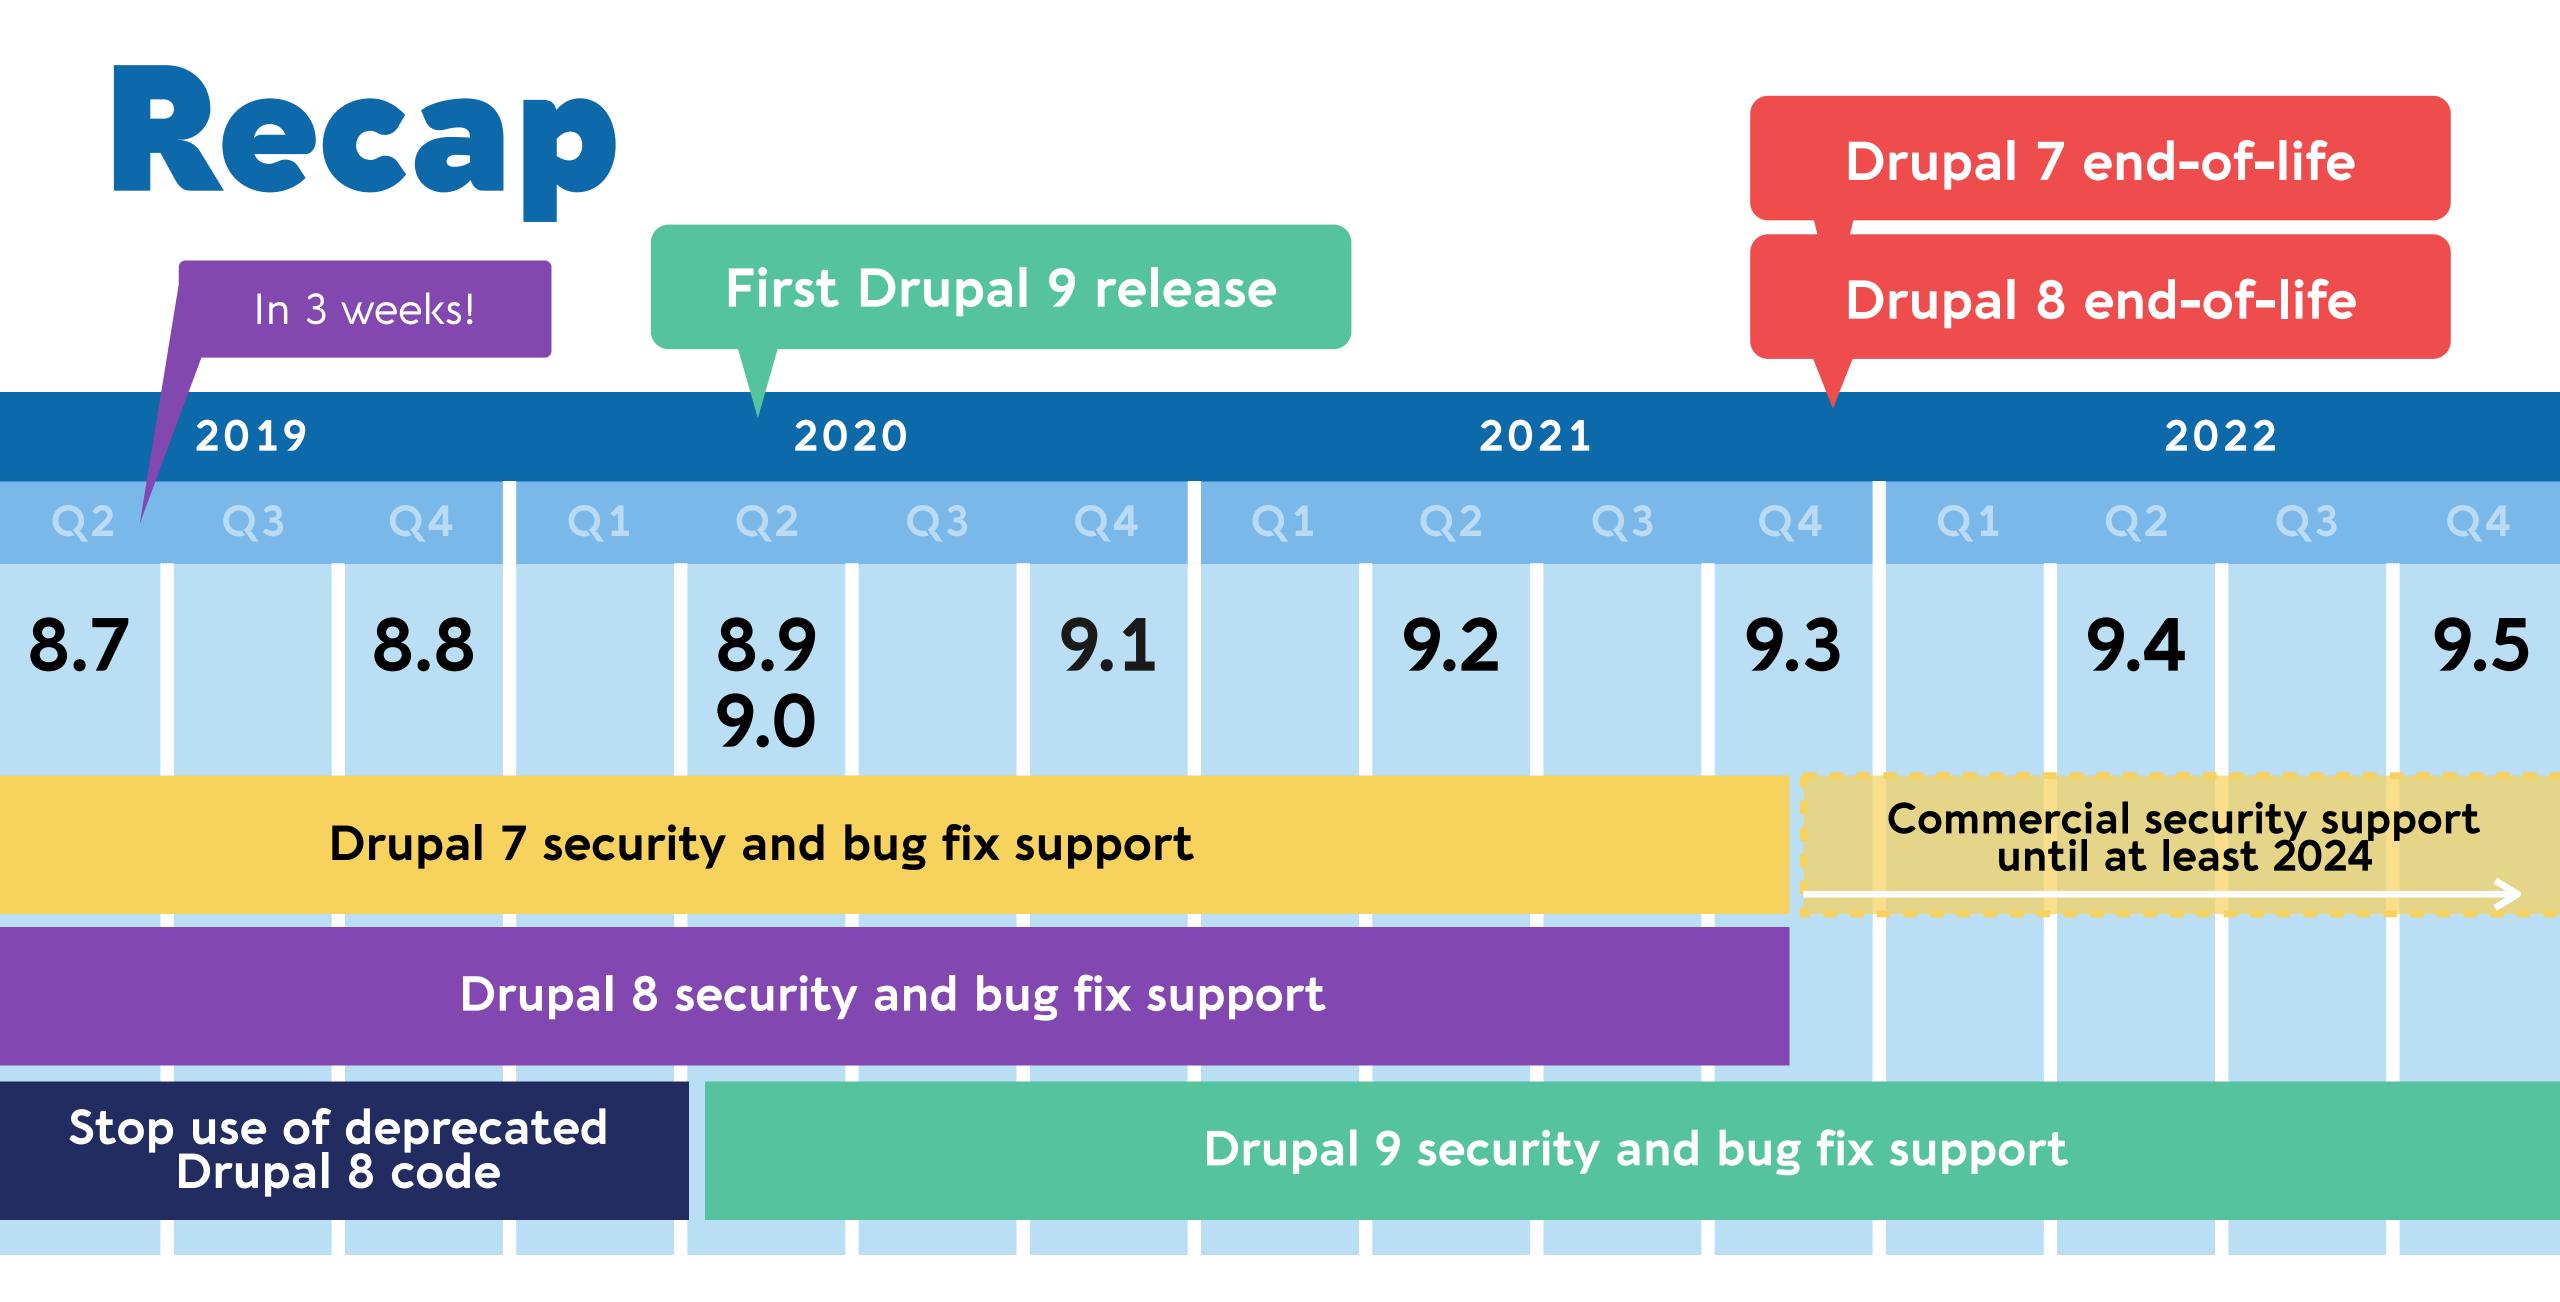

The future is bright . . . for all of us

Recap

- 1. Drupal 8.7 will be released in three weeks and is jam-packed with innovation!
- 2. Drupal 7 has community support until November 2021.

 Commercial vendors will offer extended support until at least 2024.
- 3. There are many reasons to move to Drupal 8 now. No need to skip a release.
- 4. Drupal 9 is targeted to be released in June 2020.
- 5. Updating from Drupal 8 to Drupal 9 will be easy if we manage deprecations well.

- 1. Improve diversity and inclusion in our community.
- 2. Start removing the use of deprecated code now.
- 3. Refocus on the automated upgrades problem.

Thank you
